READ AND SAVE THESE INSTRUCTIONS
PN: 241856001  (April 2009)
**IMPORTANT SAFETY INSTRUCTIONS**

**WARNING**

Please Read All Instructions Before Using This Refrigerator.

**FOR YOUR SAFETY**
- Do not store or use gasoline, or other flammable liquids in the vicinity of this or any other appliance. Read product labels for warnings regarding flammability and other hazards.
- Do not operate the refrigerator in the presence of explosive fumes.
- Avoid contact with any moving parts of automatic ice maker.
- Remove all staples from the carton. Staples can cause severe cuts, and also destroy finishes if they come in contact with other appliances or furniture.

**DEFINITIONS**

⚠️ This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠️ **WARNING**

**WARNING** indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ **CAUTION**

**CAUTION** indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

⚠️ **IMPORTANT**

**IMPORTANT** indicates installation, operation or maintenance information which is important but not hazard-related.

**CHILD SAFETY**
Destory or recycle the carton, plastic bags, and any exterior wrapping material immediately after the refrigerator is unpacked. Children should NEVER use these items to play. Cartons covered with rugs, bedspreads, plastic sheets or stretch wrap may become airtight chambers, and can quickly cause suffocation.

**PROPER DISPOSAL OF YOUR REFRIGERATOR OR FREEZER**

**Risk of child entrapment**
Child entrapment and suffocation are not problems of the past. Junked or abandoned refrigerators or freezers are still dangerous – even if they will sit for “just a few days.” If you are getting rid of your old refrigerator or freezer, please follow the instructions below to help prevent accidents.

**Before you throw away your old refrigerator/freezer:**
- Remove doors.
- Leave shelves in place so children may not easily climb inside.
- Have refrigerant removed by a qualified service technician.

⚠️ **WARNING**

These Guidelines Must Be Followed To Ensure That Safety Mechanisms In This Refrigerator Will Operate Properly.

**ELECTRICAL INFORMATION**
- The refrigerator must be plugged into its own dedicated 115 Volt, 60 Hz., 15 Amp, AC only electrical outlet. The power cord of the appliance is equipped with a three-prong grounding plug for your protection against electrical shock hazards. It must be plugged directly into a properly grounded three prong receptacle. The receptacle must be installed in accordance with local codes and ordinances. Consult a qualified electrician. Avoid connecting refrigerator to a Ground Fault Interruptor (GFI) circuit. Do not use an extension cord or adapter plug.
- If the power cord is damaged, it should be replaced by an authorized service technician to prevent any risk.
- Never unplug the refrigerator by pulling on the power cord. Always grip the plug firmly, and pull straight out from the receptacle to prevent damaging the power cord.
- Unplug the refrigerator before cleaning and before replacing a light bulb to avoid electrical shock.
- Performance may be affected if the voltage varies by 10% or more. Operating the refrigerator with insufficient power can damage the compressor. Such damage is not covered under your warranty.
- Do not plug the unit into an electrical outlet controlled by a wall switch or pull cord to prevent the refrigerator from being turned off accidentally.

⚠️ **CAUTION**

To avoid personal injury or property damage, handle tempered glass shelves carefully. Shelves may break suddenly if nicked, scratched, or exposed to sudden temperature change.

**IMPORTANT**

Pressing and holding the On/Off button for 3 seconds, located on the left side of the temperature control panel (Electronic controls), or turning the Freezer and Fresh Food controls to “0” (Mechanical controls) will disable your refrigerator’s cooling system, but does not disconnect the power to the light bulb and other electrical components. To turn off power to your refrigerator you must unplug the power cord from the electrical outlet.
This Use & Care Manual provides general operating instructions for your model. Use the refrigerator only as instructed in this Use & Care Manual. Before starting the refrigerator, follow these important first steps.

**LOCATION**
- Choose a place that is near a grounded electrical outlet. Do Not use an extension cord or an adapter plug.
- If possible, place the refrigerator out of direct sunlight and away from the range, dishwasher or other heat sources.
- The refrigerator must be installed on a floor that is level and strong enough to support a fully loaded refrigerator.
- Consider water supply availability for models equipped with an automatic ice maker.

**CAUTION**
Do Not install the refrigerator where the temperature will drop below 55°F (13°C) or rise above 110°F (43°C). The compressor will not be able to maintain proper temperatures inside the refrigerator.

Do Not block the toe grille on the lower front of your refrigerator. Sufficient air circulation is essential for the proper operation of your refrigerator.

**INSTALLATION**

**Installation Clearances**
- Allow the following clearances for ease of installation, proper air circulation, and plumbing and electrical connections:
  - Sides & Top: 3/8"
  - Back: 1"

**NOTE**
If your refrigerator is placed with the door hinge side against a wall, you may have to allow additional space so the door can be opened wider.

**DOOR OPENING**
Your refrigerator should be positioned to allow easy access to a counter when removing food. For best use of drawers and freezer baskets, the refrigerator should be in a position where both the refrigerator and freezer doors can be fully opened.

**LEVELING**
All four corners of your refrigerator must rest firmly on a solid floor. Your refrigerator is equipped with adjustable front rollers to help level your unit. To ensure proper door seal and assist door closing, the refrigerator should be tilted 1/4" (6 mm), front to back.

**To Level Your Refrigerator:**
1. Remove toe grille.
2. Use flat-blade screwdriver or 3/8" socket wrench to adjust front rollers.
3. Check both doors to be sure seals touch cabinet on all four sides.

**NOTE:** Level the unit with the adjustable rollers before leveling the doors.

**To level the doors using the adjustable lower hinge (some models):**
1. If the refrigerator door is lower than the freezer door, raise the refrigerator door by turning the adjustment screw counterclockwise using a 7/16 inch wrench. (See illustration.)
2. If the freezer door is lower than the refrigerator door, raise the freezer door by turning the adjustment screw counterclockwise using a 7/16 inch wrench. (See illustration.)
3. After leveling, verify door stop contacts lower hinge and top of door does not contact upper hinge through full movement of door (from fully closed to fully open).
4. Replace the toe grille by fitting it into place.
**WARNING**

To avoid electric shock, which can cause death or severe personal injury, disconnect the refrigerator from electrical power before connecting a water supply line to the refrigerator.

**CAUTION**

To Avoid Property Damage:
- Copper or stainless steel braided tubing is recommended for the water supply line. Water supply tubing made of ¼” plastic is not recommended to be used. Plastic tubing greatly increases the potential for water leaks, and the manufacturer will not be responsible for any damage if plastic tubing is used for supply line.
- DO NOT install water supply tubing in areas where temperatures fall below freezing.
- Chemicals from a malfunctioning softener can damage the ice maker. If the ice maker is connected to soft water, ensure that the softener is maintained and working properly.

**IMPORTANT**

Ensure that your water supply line connections comply with all local plumbing codes.

**Before Installing The Water Supply Line, You Will Need:**

- **Basic Tools:** adjustable wrench, flat-blade screwdriver, and Phillips™ screwdriver.
- Access to a household cold water line with water pressure between 30 and 100 psi.
- A water supply line made of ¼ inch (6.4 mm) OD, copper or stainless steel tubing. To determine the length of tubing needed, measure the distance from the ice maker inlet valve at the back of the refrigerator to your cold water pipe. Then add approximately 7 feet (2.1 meters), so the refrigerator can be moved out for cleaning (as shown).
- A shutoff valve to connect the water supply line to your household water system. DO NOT use a self-piercing type shutoff valve.
- A compression nut and ferrule (sleeve) for connecting a copper water supply line to the ice maker inlet valve.

**NOTE**

Check with your local building authority for recommendations on water lines and associated materials prior to installing your new refrigerator. Depending on your local/state building codes, Electrolux recommends for homes with existing valves its Smart Choice water line kit 5305513409 (with a 6 ft. stainless steel water line) and for homes without an existing valve, Electrolux recommends its Smart Choice water line kit 5304410264 (with a 20 ft. copper water line with self-tapping saddle valve). Please refer to www.frigidaire.com/store for more information.

**To Connect Water Supply Line To Ice Maker Inlet Valve**

1. Disconnect refrigerator from electric power source.
2. Place end of water supply line into sink or bucket. Turn ON water supply and flush supply line until water is clear. Turn OFF water supply at shutoff valve.
3. Remove plastic cap from water valve inlet and discard cap.
4. **If you use copper tubing** - Slide brass compression nut, then ferrule (sleeve) onto water supply line. Push water supply line into water valve inlet as far as it will go (¼ inch/6.4 mm). Slide ferrule (sleeve) into valve inlet and finger tighten compression nut onto valve. Tighten another half turn with a wrench; DO NOT over tighten. See Figure 1.
5. **If you use stainless steel tubing** - The nut and ferrule are already assembled on the tubing. Slide compression nut onto valve inlet and finger tighten compression nut onto valve. Tighten another half turn with a wrench; DO NOT over tighten. See Figure 2.
6. With steel clamp and screw, secure water supply line (copper tubing only) to rear panel of refrigerator as shown.
7. Coil excess water supply line (copper tubing only) about 2½ turns behind refrigerator as shown and arrange coils so they do not vibrate or wear against any other surface.
8. Turn ON water supply at shutoff valve and tighten any connections that leak.
9. To turn ice maker on, lower wire signal arm (side mounted) or set the ice maker’s ON/OFF power switch to the “I” position (rear mounted).

**IMPORTANT**

After connecting the water supply, refer to “How to Prime the Water Supply System” for important information about priming an empty water supply system.

Your refrigerator’s water supply system includes several tubing lines, a water filter, a water valve, and a water tank. To ensure that your water dispenser works properly, this system must be completely filled with water when your refrigerator is first connected to the household water supply line.
DOOR REMOVAL INSTRUCTIONS:

If it is necessary to move the refrigerator through narrow doorways, follow these steps to remove the doors.

Before you start:

1. Make sure the electrical power cord is unplugged from the wall outlet.
2. Remove any food from the door shelves.
3. Close the doors.

To remove the hinge cover: (some models)

1. Remove the three screws from the cover over the top door hinges.
2. Pull the cover forward about a half inch and lift it off.

To remove the refrigerator door:

1. Remove top hinge cover screw on refrigerator door and remove cover. (some models)
2. Trace lightly around the door’s top hinge with a pencil. This makes reinstallation easier.
3. Remove the two screws from the top hinge. Lift the door off of the bottom hinge and set it aside.
4. Remove the three bottom hinge screws and hinge, if necessary.

To remove the freezer door:

1. Detach the multi-wire cable connector located above the top hinge. Grasp both sides of the connector firmly and pull apart.
2. Remove top hinge cover screw on freezer door and remove cover. (some models)
3. Trace lightly around the door’s top hinge with a pencil. This makes reinstallation easier.
4. Detach the water tube from the connector located below the freezer door. The connector releases when you press its outer sleeve inward.
5. Remove the screws from the top hinge and pull the multi-wire cable through it.
6. Lift the door off of the bottom hinge. Lay the door on its side to avoid damage to the Remove the three bottom hinge screws and hinge, if necessary.

To reinstall the refrigerator and freezer doors, reverse the above steps.
MECHANICAL TEMPERATURE CONTROLS

COOL DOWN PERIOD
To ensure safe food storage, allow the refrigerator to operate with the doors closed for at least 8 to 12 hours before loading it with food.

REFRIGERATOR & FREEZER CONTROLS

NOTE
When changing control settings, wait 24 hours for the temperature to stabilize before making additional changes.

TEMPERATURE ADJUSTMENT
• After 24 hours, adjust the controls as needed. Adjust temperatures gradually; move the knob in small increments, allowing the temperature to stabilize.
• For colder temperatures, turn the knob towards Colder.
• For warmer temperatures, turn the knob towards Cold.

To maintain temperatures, a fan circulates air in the refrigerator and freezer compartments. For good circulation, do not block cold air vents with food items.

ALLOWING COOLING TIME BEFORE USE

To ensure safe food storage, allow your refrigerator to operate with the doors closed for at least 8 to 12 hours before placing food inside. During this cooling period, you do not need to adjust the controls, which are preset at the factory.

SETTING COOLING TEMPERATURES

Your refrigerator comes with a state-of-the-art electronic digital control system. The system’s control panel is located at the top of the fresh food compartment.

The two digital displays on the left half of the control panel indicate the current settings or temperatures of your freezer and fresh food compartments. The models with a 2-digit temperature display are for reference only, and do not display the current accurate compartment temperature. Should you desire to see what the current accurate temperature is, place a separate thermometer inside the freezer or fresh food compartment in the desired location.

NOTE

The advanced electronic control system in your refrigerator includes additional display modes that service professionals can use to rapidly diagnose performance issues.

TEMPERATURE ADJUSTMENT

To adjust the temperature to a higher or lower setting, press the Up (Cold) or Down (Colder) button closest to the display. The first time you press the button, the display shows current setting you entered. Each press of the button after that changes the setting by one.

The display shows your new setting momentarily, then changes back to the current temperature.

IF TEMPERATURE DISPLAYS FLASH...

If ever you see both temperature displays continuously flashing, it may indicate that the control system has detected a performance problem. Call your service representative, who can interpret the flashing message.

To maintain temperatures, a fan circulates air in the refrigerator and freezer compartments. For good circulation, do not block cold air vents with food items.

### Temperature Adjustment

- If Fresh Food compartment is too warm, adjust Fresh Food control one degree colder by pressing Down (Colder) button.
- If Fresh Food compartment is too cold, adjust Fresh Food control one degree warmer by pressing Up (Cold) button.
- If Freezer compartment is too warm, adjust Freezer control one degree colder by pressing Down (Colder) button.
- If Freezer compartment is too cold, adjust Freezer control one degree warmer by pressing Up (Cold) button.
ELECTRONIC TEMPERATURE CONTROLS (CONTINUED)

TURNING THE COOLING SYSTEM ON AND OFF

You can disable the cooling system in your refrigerator by pressing the On/Off button located on the left side of the temperature control panel. To ensure that you do not accidentally turn off the cooling system, the button does not work unless you press and hold it for three seconds. Once you disable the cooling system, all refrigeration to the freezer and fresh food compartments stops. To turn the cooling system back on, you must again press and hold the On/Off button for three more seconds.

AIR FILTER INDICATOR & STATUS LIGHTS

Your refrigerator’s air filter needs to be replaced from time to time. You can monitor the need for replacement by referring to the status light while the air filter is “ON”. To turn on the air filter, press the AIR FILTER button. To turn off the air filter, press the AIR FILTER button. To reset the air filter, press the AIR FILTER button and hold for 3 seconds.

REPLACING THE AIR FILTER

In general, you should change the air filter every six months to ensure optimal filtering of refrigerator odors. You may want to adjust this time period depending on the types and amounts of food you typically store in your refrigerator.

To replace your air filter:

1. Push the plastic bubble tab located on the side of the air filter housing. This releases the hinged bottom half to drop open.
2. Remove the old filter and discard it.

3. Unpackage the new filter and place it inside the hinged bottom half of the housing.
4. Push the hinged bottom half upward until the tab snaps into closed position.
5. Press and hold the Filter Reset button on the electronic control panel for 3 seconds. When the Filter OK light comes on, the status has been reset.
6. Press and hold the Filter Reset button for 3 seconds again to turn off the filter status system.

RESPONDING TO ALARMS (Audible Tones & Indicator Lights)

Your refrigerator’s control system can convey the following information through audible tones and the alarm indicator lights.

<table>
<thead>
<tr>

</tbody>
</table>

Air Filter Status Light (not available on all models)

To order new air filter cartridges, contact the dealer where you bought your refrigerator, contact Electrolux Solutions Hotline at 1-800-944-9044, or go to our web site at www.frigidaire.com. It would be beneficial to order some cartridges when you first install your refrigerator. Be sure and ask for air filter replacement cartridge, part # 241504902.
## AUTOMATIC ICE & WATER DISPENSER OPERATING INSTRUCTIONS

### Features may vary according to model.

#### EXtREmE fREEzE
To freeze food at a faster rate to preserve freshness, push the Touch Pad ① for 3-5 seconds to activate this feature. A green light will appear above the Touch Pad. Push the Touch Pad ① again for 3-5 seconds to deactivate.

#### EXtRA ICE
To increase ice production for special occasions, such as parties, push the Touch Pad ② for 3-5 seconds to activate this feature. A green light will appear above the Touch Pad. Push the Touch Pad ② again for 3-5 seconds to deactivate. Extra Ice should produce 25 percent to 50 percent more ice every 24 hours.

#### CUBE
Press the CUBE Touch Pad ③ to get cubed ice. A green light will appear above the Touch Pad. Press glass against ICE dispensing paddle ⑧ as far up as possible to catch all ice.

#### CRUSH
Press the CRUSH Touch Pad ④ to get crushed ice. A green light will appear above the Touch Pad. Press glass against ICE dispensing paddle ⑧ as far up as possible to catch all ice.

#### LIGHT
Press the LIGHT Touch Pad ⑤ to turn on dispenser light. Press ⑤ again to turn the light off. The light also turns on automatically when ice and/or water is dispensed. Replace light bulb with an appliance bulb of the same wattage.

#### FILTER STATUS
The FILTER STATUS indicator light above the Touch Pad ⑥ will light up each time the dispenser is used. The following filter light indications are:

- **Green**: The filter is still operating within its specified life cycle.
- **Amber**: The filter has reached approximately 80 percent of its useful life. This is the recommended time to purchase a replacement filter.
- **Red**: The filter is 100 percent used up. Change the filter as soon as possible.

After the filter cartridge has been changed, press and hold the FILTER RESET Touch Pad ⑥ for 10-15 seconds.

**NOTE**: The Green, Amber and Red lights will flash when reset is completed.

#### LOCK
The Ice & Water Dispenser can be locked out to prevent unwanted use.

**To Lock Out**
Press the LOCK Touch Pad ⑦ for 3-5 seconds. A Red light will appear above the Touch Pad.

**To Unlock**
Press the LOCK Touch Pad ⑦ for 3-5 seconds until the Red light above the Touch Pad goes out.

#### WATER
To operate the water dispenser, press a glass against the WATER dispensing paddle ⑨. To stop dispensing water, pull the glass away from the dispensing paddle ⑨. Dispensed water is not cold. For colder water, add crushed ice or cubes before dispensing water. A drip tray located at the base of the dispenser catches small spills and allows them to evaporate. This drip tray is removable and dishwasher safe. Do not pour water and excess ice in this area because there is no drain.
HOW TO PRIME THE WATER SUPPLY SYSTEM

Your refrigerator’s water supply system includes several tubing lines, a water filter, a water valve and a water tank. To ensure that your water dispenser works properly, this system must be completely filled with water when your refrigerator is first connected to the household water supply line and whenever you replace the water filter.

### CAUTION

For proper dispenser operation, recommended water supply pressure should fall between 30 psi and 100 psi. Excessive pressure may cause water filter to malfunction.

### TO PRIME THE WATER SUPPLY SYSTEM:

- Begin filling the tank by pressing and holding a drinking glass against the water dispenser paddle.
- Keep the glass in this position until water comes out of the dispenser. There will be noticeable spurts and sputters as the system pushes air out through the system and dispenser nozzle. This is normal. **This may take about 1½ minutes.**
- Continue dispensing water for about 3 minutes to flush the system of any air and impurities. Empty glass as needed.

### NOTE

The water dispenser has a built-in device that shuts off the water flow after 3 minutes of continuous use. To reset this shutoff device, simply release the dispenser paddle.

HOW THE ICE MAKER WORKS

### CAUTION

Chemicals from a malfunctioning softener can damage the ice maker. If the ice maker is connected to soft water, ensure that the softener is maintained and working properly.

### IMPORTANT

Your ice maker is shipped from the factory with the wire signal arm in the ON position (side mounted) or with the switch turned ON (rear mounted). To ensure proper function of your ice maker, hook up water supply immediately or turn ice maker OFF by lifting the wire signal arm until it clicks and locks in the UP position (side mounted) or turn the On/Off switch to the Off (0) position. **If the ice maker is not turned off and the water supply is not connected, the water valve will make a loud chattering noise.**
The ice maker and container are located in the top of the freezer compartment. After the refrigerator is installed properly and has cooled for several hours, the ice maker can begin making ice within 24 hours. Air in new plumbing lines may cause the ice maker to cycle two or three times before making a full tray of ice. With no usage, it will take approximately two days to fill the ice container.

Because of new plumbing connections, the first production of ice cubes may be discolored or have an odd flavor. Discard ice made during the first 24 hours.

**TURNING YOUR SIDE MOUNTED ICE MAKER ON/OFF**

To begin ice production, lower the wire signal arm to the DOWN or ON position. The ice maker turns off automatically when the ice container becomes full. To stop the ice maker, raise the wire signal arm until it clicks and locks in the UP or OFF position (see Figure 1).

**TURNING YOUR REAR MOUNTED ICE MAKER ON/OFF**

Ice production is controlled by the ice maker’s ON/OFF power switch. To gain access to the ice maker, pull the ice cream shelf out. Press the switch to the “O” position to turn it Off and press it to the “I” position to turn it On (see Figure 2). The ice maker also has a built-in wire signal arm, which automatically stops ice production when the ice bin is full. **DO NOT** use this signal arm to manually stop the ice maker.

**Figures 1 and 2**

**IMPORTANT**

Small ice cubes or ice chips jamming in the ice maker may be a sign that your water filter needs changing. If you have a side mounted ice maker you may also experience hollow cubes — partially frozen cubes with water inside. When these cubes are harvested they break open and spill water over the other ice cubes in the ice container, forming a solid mass of ice. As the water filter nears the end of its useful life and becomes clogged with particles, less water is delivered to the ice maker during each cycle. The ice maker can’t fill every cube in the ice maker mold, leading to small cubes or chips that can get caught between the ice ejector blades and the stripper. **Remember, if your ice maker is jamming with small ice cubes or it’s been six months or longer since you last changed your water filter – replace the water filter with a new one. Poor quality household water may require the filter to be changed more frequently.**

**ICE PRODUCTION: WHAT TO EXPECT**

**How Much Ice Will a Side Mounted Ice Maker Produce in 24 Hours?**

A side mounted ice maker will produce 4 to 4.5 pounds of ice every 24 hours, depending on usage conditions. Ice is produced at a rate of 8 cubes every 75 to 90 minutes.

**How Much Ice Will a Rear Mounted Ice Maker Produce in 24 Hours?**

A rear mounted ice maker will produce 3 to 4 pounds of ice every 24 hours, depending on usage conditions. Ice is produced at a rate of 8 cubes every 75 to 90 minutes.

**CAUTION**

If the dispensing paddle is pushed for more than four minutes, the dispenser motor may overload and stop. The overload protector will reset automatically after three or four minutes.

**WARNING**

Do not use the ice chute as a handle when removing or replacing the ice storage bin. Do not put fingers up ice chute. Surfaces there may be sharp.

**CAUTION**

NEVER use an ice pick or similar sharp instrument to break up the ice. This could damage the ice storage bin and dispenser mechanism.
PURESOURCE™ ICE AND WATER FILTER (SOME MODELS)

Order new filter cartridges through the dealer where you bought the refrigerator, contact the Electrolux Solutions Hotline at 1-800-944-9044, or go to our web site at www.frigidaire.com. It might be good to order some filter cartridges when you first install your refrigerator. Be sure to ask for the RG-100 PureSource™ replacement cartridge.

System Startup:

Water supply does not need to be turned off, however, do not use ice and water dispenser while installing filter. The filter cartridge has already been installed in the filter housing at the factory. Refer to the How to Prime the Water Supply System section to properly fill the system with water.

To change filter:

It is not necessary to turn the water supply off to change the filter.

1. Open freezer door and leave open until filter change is complete.
2. Turn OFF side mounted ice maker by raising wire signal arm to the UP position. Turn OFF rear mounted ice maker by pressing ON/OFF power switch to the “O” position.
3. Hold filter cup firmly, and unscrew towards left. (Some water could leak out as you remove cup. This is normal.) Filter cartridge should come down with cup. If cartridge remains in housing, pull down gently, while twisting filter back and forth.
4. Rinse out cup under running water.
5. The large o-ring that seals the filter system fits in the o-ring groove inside the cup. Should the o-ring fall out during filter cartridge replacement, simply place it back in the groove prior to screwing the cup back in place. If the o-ring becomes damaged, you will need to order one from the Electrolux Solutions Hotline.
7. Remove new filter cartridge from packaging. Place in cup. The end with the small o-ring should be up, out of the cup.
8. Screw cup, with filter, back onto housing. Do Not Use Wrench To Reinstall Cup. Filter cartridge will self-align as cup is tightened. Be sure cup is completely tightened with PureSource™ logo facing outward. Do Not Tighten Past Stop.
9. Turn ON side mounted ice maker by lowering wire signal arm to the DOWN position. Turn ON rear mounted ice maker by pressing ON/OFF power switch to the “I” position.
10. Check for leaks. Open refrigerator door. Wipe any water droplets from the filter cup. Fill a glass with water. If there is a leak, unscrew filter cup, and reinsert the filter cartridge. Check placement of large O-ring. Reinstall filter cup, making certain it is tightened completely.
11. To prime filter system and purge air from water line, continue flushing the system for approximately 3 minutes to assure that the purest water possible is stored in the water tank. There will be noticeable spurts and sputters as the system pushes air out through the system and out the dispenser nozzle. This is normal.

Changing the Filter:

Water conditions vary throughout the world, but changing the water filter every 6 - 9 months normally will ensure the highest possible water quality. Ice jams in the ice maker and/or hollow ice cubes (partially frozen cubes with water inside), may also be a sign that your water filter needs changing. The Filter Status light will turn red after 400 gallons of water has flowed through the ice and water dispenser. Also, if the filter has been in a refrigerator that has not been in use for awhile (during moving for example), change the filter before reinstalling the refrigerator. The dispenser system will also operate without filtration (with filter cartridge removed).

* White Westinghouse uses the name CrystalClear instead of PureSource, but they are the same filter.

The PureSource™ * NGRG-2000 Ice and Water Filter System with the RG-100 cartridge is tested and certified by NSF International, the nationally recognized and respected, not for profit, certification organization for public health safety. The PureSource™ system is tested and certified to ANSI/NSF Standard 42. See performance data sheet for specifications. This system should not be used on water that is microbiologically unsafe or with water of unknown quality unless the water has been adequately disinfected before or after traveling through the filtration system.

- Rated Capacity - 400 gallons
- Rated service flow - .5 GPM
- Maximum Rated Pressure - 100 PSI, Minimum 30 PSI
- Maximum Operating Temp. - 100°F, Minimum 33°F

Resetting The Filter Status Light (some models)

After replacing the filter cartridge, it will be necessary to press the Filter Status Reset button located on the ice and water dispenser. This will reset the Filter Status light. Push the Reset button until the green, red and amber lights flash (10-15 seconds). Please refer to the complete dispenser operating instructions attached to the inside of the freezer door.

On models without a Filter Status reset button, there is a set of Reminder Stickers included in the envelope that the Use & Care Manual came in. Choose a dated sticker that indicates 6 - 9 months (depending on your water quality and usage) from the date of installation. Place the sticker on the front of the filter cup to remind you when it is time to change the filter.

© 2001 Electrolux Home Products, Inc.
PURESOURCE2™ ICE AND WATER FRONT FILTER (SOME MODELS)

Order new filter cartridges through the dealer where you bought the refrigerator, contact the Electrolux Solutions Hotline at 1-800-944-9044, or go to our web site at www.frigidaire.com. It might be good to order some filter cartridges when you first install your refrigerator. Be sure to ask for the FC-100 PureSource™ replacement cartridge.

System Startup:

Water supply does not need to be turned off, however, do not use ice and water dispenser while installing filter.
The filter cartridge has already been installed in the filter housing at the factory. Refer to the How to Prime the Water Supply System section to properly fill the system with water.

Resetting the Filter Status Light (some models)

After replacing the filter cartridge, it will be necessary to press the Filter Reset button located on the ice and water dispenser. This will reset the Filter Status light. Push the reset button until the green, red and amber lights flash (10-15 seconds).

Changing the Filter:

Water conditions vary throughout the world, but changing the water filter every 6 - 9 months normally will ensure the highest possible water quality. Ice jams in the ice maker and/or hollow ice cubes (partially frozen cubes with water inside), may also be a sign that your water filter needs changing. The Filter Status light will turn red after approximately 400 gallons of water has flowed through the ice and water dispenser. Also, if the filter has been in a refrigerator that has not been in use for awhile (during moving for example), change the filter before reinstalling the refrigerator. The dispenser system will also operate without filtration (with filter cartridge removed and bypass installed).

• Rated Capacity - 400 gallons
• Rated service flow - .5 GPM
• Maximum Rated Pressure - 100 PSI, Minimum 30 PSI
• Maximum Operating Temp. - 100°F, Minimum 33°F

To change filter:

It is not necessary to turn the water supply off to change the filter.

1. Turn OFF side mounted ice maker by raising wire signal arm to the UP position. Turn OFF rear mounted ice maker by pressing ON/OFF power switch to the “O” position.
2. Push the Filter Release Button, located to the right of the filter cartridge, to release the filter from the housing. To minimize the possibility of the filter falling out of the housing during removal, it would be best to hold the filter as it moves out toward you.
3. Pull the old filter cartridge straight out of the housing.
4. Discard the old filter.
5. Remove the new filter cartridge from the packaging. Remove caps from filter and insert into the filter housing the same way the old one came out.
6. When the cartridge is almost in, you will feel it stop against the clip assembly in the back of the housing. The clip assembly holds the filter cartridge firmly in place. At this point, you will need to push firmly until the cartridge snaps fully in place. When completely in place, the front of the filter cartridge will be flush with the front of the housing.
7. Turn ON side mounted ice maker by lowering wire signal arm to the DOWN position. Turn ON rear mounted ice maker by pressing ON/OFF power switch to the “I” position.
8. Fill a glass with water. As you are doing this, check for leaks at the filter housing.
9. To prime filter system and purge air from water line, continue flushing the system for approximately 3 minutes to assure that the purest water possible is stored in the water tank. There will be noticeable spurts and sputters as the system pushes air out through the system and out the dispenser nozzle. This is normal.

NOTE

A small amount of water may be released during this operation. You should have a paper towel or dish cloth handy to wipe up any water that may drip out of the filter or housing. Two small holes near the back of the housing have been added for any excess water to escape. It would be best to clear away any food near this area on the top shelf in advance of removing the filter.

* White Westinghouse uses the name CrystalClear instead of PureSource, but they are the same filter.
UNDERSTANDING THE SOUNDS YOU MAY HEAR

Your new high-efficiency refrigerator may make unfamiliar sounds. These are all normal sounds and soon will become familiar to you. They also indicate your refrigerator is operating as designed. Hard surfaces, such as vinyl or wood floors, walls, and kitchen cabinets may make sounds more noticeable. Listed below are descriptions of some of the most common sounds you may hear, and what is causing them.

A. Evaporator
   The flow of refrigerant through the evaporator may create a boiling or gurgling sound.

B. Evaporator Fan
   You may hear air being forced through the refrigerator by the evaporator fan.

C. Defrost Heater
   During defrost cycles, water dripping onto the defrost heater may cause a hissing or sizzling sound. After defrosting, a popping sound may occur.

D. Automatic Ice Maker
   If your refrigerator is equipped with an automatic ice maker, you will hear ice cubes falling into the ice bin.

E. Cold Control & Automatic Defrost Control
   These parts can produce a snapping or clicking sound when turning the refrigerator on and off.

F. Condenser Fan
   You may hear air being forced through the condenser by the condenser fan.

G. Compressor
   Modern, high-efficiency compressors operate much faster than older models. The compressor may have a high-pitched hum or pulsating sound.

H. Water Valve
   If your refrigerator is equipped with an automatic ice maker, you will hear a buzzing sound as the water valve opens to fill the ice maker during each cycle.

I. Drain Pan (not removable)
   You may hear water running into the drain pan during the defrost cycle.

J. Condenser
   May create minimal sounds from forced air.

K. Motorized Damper
   May produce a light humming during operation.

NOTE
Rigid foam insulation is very energy efficient, but is not a sound insulator.

CAUTION
Wear gloves when replacing light bulbs to avoid getting cut.

IMPORTANT
Your ice maker is turned On at the factory so it can work as soon as you install your refrigerator. To ensure proper function of your ice maker, connect a water supply immediately or turn the Ice maker off by lifting the wire signal arm to the “up” or OFF position (side mounted) or the ice maker's On/Off power switch turned Off-set to the “0” position (rear mounted).

REPLACING LIGHT BULBS

1. Unplug refrigerator.
2. Wear gloves as protection against possible broken glass.
3. Remove light cover, if necessary.
4. Unscrew and replace old bulb with an appliance bulb of the same wattage.
5. Replace light cover, if necessary.
6. Remember to plug the refrigerator back in.
CARE & CLEANING

Keep your refrigerator and freezer clean to prevent odor build-up. Wipe up any spills immediately and clean both sections at least twice a year. Never use metallic scouring pads, brushes, abrasive cleaners or strong alkaline solutions on any surface. Do not wash any removable parts in a dishwasher. Always unplug the power cord from the electrical outlet before cleaning.

⚠️ CAUTION ⚠️

- When moving the refrigerator, pull straight out. Do not shift the refrigerator from side to side as this may damage the floor. Be careful not to move the refrigerator beyond the plumbing connections.
- Damp objects stick to cold metal surfaces. Do not touch refrigerated surfaces with wet or damp hands.
- Never use CHLORIDE to clean stainless steel.

💬 NOTE 💬

- The ON/OFF button on the Electronic Control only controls your refrigerator's cooling system. To turn off power to your refrigerator you must unplug the power cord from the electrical outlet.
- Do not use razor blades or other sharp instruments which can scratch the appliance surface when removing adhesive labels. Any glue left from tape or labels can be removed with a mixture of warm water and mild detergent, or, touch the glue residue with the sticky side of tape you have already removed. Do not remove the serial plate.

💬 NOTE 💬

Do not use abrasive cleaners such as window sprays, scouring cleansers, flammable fluids, cleaning waxes, concentrated detergents, bleaches, or cleansers containing petroleum products on plastic parts, interior doors, gaskets, or cabinet liners. Do not use paper towels, scouring pads, or other abrasive cleaning materials.

➡️ IMPORTANT ➡️

If the refrigerator is going to be stored or moved in freezing temperatures, the water in the ice and water system must be drained completely. Failure to do so could result in water leaks when the refrigerator is put back into service. Contact a service representative to perform this operation.

NOTE: Always clean, wipe and dry with the grain to prevent scratching. Wash the rest of the cabinet with warm water and mild liquid detergent. Rinse well, and wipe dry with a clean soft cloth.
Your appliance is covered by a one year limited warranty. For one year from your original date of purchase, Electrolux will pay all costs for repairing or replacing any parts of this appliance that prove to be defective in materials or workmanship when such appliance is installed, used and maintained in accordance with the provided instructions.

Exclusions

This warranty does not cover the following:

1. Products with original serial numbers that have been removed, altered or cannot be readily determined.
2. Product that has been transferred from its original owner to another party or removed outside the USA or Canada.
3. Rust on the interior or exterior of the unit.
4. Products purchased "as-is" are not covered by this warranty.
5. Food loss due to any refrigerator or freezer failures.
6. Products used in a commercial setting.
7. Service calls which do not involve malfunction or defects in materials or workmanship, or for appliances not in ordinary household use or used other than in accordance with the provided instructions.
8. Service calls to correct the installation of your appliance or to instruct you how to use your appliance.
9. Expenses for making the appliance accessible for servicing, such as removal of trim, cupboards, shelves, etc., which are not a part of the appliance when it is shipped from the factory.
10. Service calls to repair or replace appliance light bulbs, air filters, water filters, other consumables, or knobs, handles, or other cosmetic parts.
11. Surcharges including, but not limited to, any after hour, weekend, or holiday service calls, tolls, ferry trip charges, or mileage expense for service calls to remote areas, including the state of Alaska.
12. Damages to the finish of appliance or home incurred during installation, including but not limited to floors, cabinets, walls, etc.
13. Damages caused by: services performed by unauthorized service companies; use of parts other than genuine Electrolux parts or parts obtained from persons other than authorized service companies; or external causes such as abuse, misuse, inadequate power supply, accidents, fires, or acts of God.

DISCLAIMER OF IMPLIED WARRANTIES; LIMITATION OF REMEDIES

CUSTOMER'S SOLE AND EXCLUSIVE REMEDY UNDER THIS LIMITED WARRANTY SHALL BE PRODUCT REPAIR OR REPLACEMENT AS PROVIDED HEREIN. CLAIMS BASED ON IMPLIED WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO ONE YEAR OR THE SHORTEST PERIOD ALLOWED BY LAW, BUT NOT LESS THAN ONE YEAR. ELECTROLUX SHALL NOT BE LIABLE FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES SUCH AS PROPERTY DAMAGE AND INCIDENTAL EXPENSES RESULTING FROM ANY BREACH OF THIS WRITTEN LIMITED WARRANTY OR ANY IMPLIED WARRANTY. SOME STATES AND PROVINCES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, OR LIMITATIONS ON THE DURATION OF IMPLIED WARRANTIES, SO THESE LIMITATIONS OR EXCLUSIONS MAY NOT APPLY TO YOU. THIS WRITTEN WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS. YOU MAY ALSO HAVE OTHER RIGHTS THAT VARY FROM STATE TO STATE.

If You Need Service

Keep your receipt, delivery slip, or some other appropriate payment record to establish the warranty period should service be required. If service is performed, it is in your best interest to obtain and keep all receipts. Service under this warranty must be obtained by contacting Electrolux at the addresses or phone numbers below.

This warranty only applies in the USA and Canada. In the USA, your appliance is warranted by Electrolux Major Appliances North America, a division of Electrolux Home Products, Inc. In Canada, your appliance is warranted by Electrolux Canada Corp. Electrolux authorizes no person to change or add to any obligations under this warranty. Obligations for service and parts under this warranty must be performed by Electrolux or an authorized service company. Product features or specifications as described or illustrated are subject to change without notice.

<tr>
<td><strong>AUTOMATIC ICE MAKER</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| Ice maker is not making any ice. | - Ice maker wire signal arm is in the “up” or OFF position.  
- Ice maker power switch is Off.  
- Ice maker has small cube caught in mechanism.  
- Saddle valve on cold water pipe is clogged or restricted by foreign material. | - Move wire signal arm to the “down” or ON position. (side mounted)  
- Turn power switch to On (“I”) position. (rear mounted)  
- Remove small cube from ice maker. The ice and water filter cartridge may be clogged. Replace filter cartridge.  
- Turn off household water line valve. Remove valve. Ensure that valve is not a self-piercing saddle valve. Clean valve. Replace valve if necessary. |
| Ice maker is not making enough ice. | - Ice maker is producing less ice than you expect.  
- Check to see if water dispenser is dispensing slower than normal. | - Side mounted ice maker should produce 4 to 4.5 pounds (approximately 4 quarts) of ice every 24 hours. A rear mounted ice maker should produce 3 to 4 pounds (approximately 3½ quarts) of ice every 24 hours. Quick Ice option should produce up to 50% more ice every 24 hours.  
- If it is, replace the ice and water filter cartridge. |
| Ice maker will not stop making ice. | - Ice maker wire signal arm is being held down by some item in the freezer. | - Move item and release wire signal arm. Remove any ice cubes that are frozen together over the wire signal arm. |
| Ice cubes are freezing together. | - Ice cubes are not being used frequently enough.  
- Ice cubes are hollow (partially frozen cubes with water inside).  
- Freezer control is set too warm. | - Remove ice container and discard ice from container. Ice maker will produce fresh supply.  
- The ice and water filter cartridge may be clogged. Replace filter cartridge.  
- Set freezer control to colder setting. Allow 24 hours for temperature to stabilize. |
| **ICE DISPENSER**              |                                                                      |                                                                                                                                          |
| Dispenser will not dispense ice. | - Ice storage container is empty.  
- Freezer temperature is set too warm.  
- Household water line valve is not open.  
- Ice dispensing arm has been held in for more than 4-5 minutes. | - When the first supply of ice is dropped into the container, the dispenser should operate.  
- Turn freezer control to a higher setting so that ice cubes will be made. When first supply of ice is made, dispenser should operate.  
- Open household water line valve. Allow sufficient time for the ice to be made. When ice is made, the dispenser should operate.  
- Motor is overloaded. Motor over load protector will reset in approximately 3 minutes. Ice can then be dispensed. |
| Ice dispenser is jammed.       | - Ice has melted and frozen around auger due to infrequent use, temperature fluctuations, and/or power outages.  
- Ice cubes are jammed between ice maker and back of ice container. | - Remove ice container, thaw, and empty the contents. Clean container, wipe dry, and replace in proper position. When new ice is made, dispenser should operate.  
- Remove ice cubes that are jamming the dispenser. |
| **OPENING/CLOSING OF DOORS/DRAWERS** |                                                                      |                                                                                                                                          |
| Door(s) will not close.        | - Door was closed too hard, causing other door to open slightly.  
- Refrigerator is not level. It rocks on the floor when moved slightly.  
- Refrigerator is touching a wall or cabinet. | - Close both doors gently.  
- Ensure floor is level and solid, and can adequately support the refrigerator. Contact a carpenter to correct a sagging or sloping floor.  
- Ensure floor is level and solid, and can adequately support the refrigerator. Contact a carpenter to correct a sagging or sloping floor. |
| Drawers are difficult to move. | - Food is touching shelf on top of drawer.  
- Track that drawers slide on is dirty. | - Remove top layer of items in drawer.  
- Ensure drawer is properly installed on track.  
- Clean drawer, rollers, and track. See Care & Cleaning. |
