READ AND SAVE THESE INSTRUCTIONS
IMPORTANT SAFETY INSTRUCTIONS

WARNING
Please Read All Instructions Before Using This Refrigerator.

FOR YOUR SAFETY
• Do not store or use gasoline, or other flammable liquids in the vicinity of this or any other appliance. Read product labels for warnings regarding flammability and other hazards.
• Do not operate the refrigerator in the presence of explosive fumes.
• Avoid contact with any moving parts of automatic ice maker.
• Remove all staples from the carton. Staples can cause severe cuts, and also destroy finishes if they come in contact with other appliances or furniture.

CHILD SAFETY
Destroy or recycle the carton, plastic bags, and any exterior wrapping material immediately after the refrigerator is unpacked. Children should NEVER use these items to play. Cartons covered with rugs, bedspreads, plastic sheets or stretch wrap may become airtight chambers, and can quickly cause suffocation.

WARNING
These Guidelines Must Be Followed To Ensure That Safety Mechanisms In This Refrigerator Will Operate Properly.

ELECTRICAL INFORMATION
• The refrigerator must be plugged into its own dedicated 115 Volt, 60 Hz., AC only electric outlet. The power cord of the appliance is equipped with a three-prong grounding plug for your protection against electrical shock hazards. It must be plugged directly into a properly grounded three-prong receptacle. The receptacle must be installed in accordance with local codes and ordinances. Consult a qualified electrician. Do not use an extension cord or adapter plug.
• If the power cord is damaged, it should be replaced by the manufacturer, service technician or a qualified person to prevent any risk.
• Never unplug the refrigerator by pulling on the power cord. Always grip the plug firmly, and pull straight out from the receptacle to prevent damaging the power cord.
• Unplug the refrigerator before cleaning and before replacing a light bulb to avoid electrical shock.
• Performance may be affected if the voltage varies by 10% or more. Operating the refrigerator with insufficient power can damage the compressor. Such damage is not covered under your warranty.
• Do not plug the unit into an outlet controlled by a wall switch or pull cord to prevent the refrigerator from being turned off accidentally.
• Avoid connecting refrigerator to a Ground Fault Interruptor (GFI) circuit.

PROPER DISPOSAL OF YOUR REFRIGERATOR OR FREEZER
Risk of child entrapment
Child entrapment and suffocation are not problems of the past. Junked or abandoned refrigerators or freezers are still dangerous—even if they will sit for “just a few days.” If you are getting rid of your old refrigerator or freezer, please follow the instructions below to help prevent accidents.

Before you throw away your old refrigerator/freezer:
• Remove doors.
• Leave shelves in place so children may not easily climb inside.
• Have refrigerant removed by a qualified service technician.

IMPORTANT
Turning the Freezer and Fresh Food Controls to “0” turns off the compressor and prevents your refrigerator from cooling, but does not disconnect the power to the light bulb and other electrical components. To turn off power to your refrigerator you must unplug the power cord from the wall outlet.

CAUTION
To avoid personal injury or property damage, handle tempered glass shelves carefully. Shelves may break suddenly if nicked, scratched, or exposed to sudden temperature change.
This Use & Care Manual provides specific operating instructions for your model. Use the refrigerator only as instructed in this Use & Care Manual. Before starting the refrigerator, follow these important first steps.

LOCATION

- Choose a place that is near a grounded electrical outlet. Do Not use an extension cord or an adapter plug.
- If possible, place the refrigerator out of direct sunlight and away from the range, dishwasher or other heat sources.
- The refrigerator must be installed on a floor that is level and strong enough to support a fully loaded refrigerator.
- Consider water supply availability for models equipped with an automatic ice maker.

INSTALLATION

CAUTION

Do Not install the refrigerator where the temperature will drop below 55°F (13°C) or rise above 110°F (43°C). The compressor will not be able to maintain proper temperatures inside the refrigerator.

Do Not block the toe grille on the lower front of your refrigerator. Sufficient air circulation is essential for the proper operation of your refrigerator.

IMPORTANT

If you install your refrigerator in a garage or other unheated area, you may experience freezer temperature problems during the winter months when temperatures dip below 55°F.

Upgrading your refrigerator with a Garage Kit will lower the minimum operating temperature of your unit to 34°F. This kit can be ordered through the Electrolux Solutions Hotline (see back cover).

Installation Clearances

- Allow the following clearances for ease of installation, proper air circulation, and plumbing and electrical connections:
  
  | Sides & Top | 3/8" |
  | Back        | 1"   |

NOTE

If you see black coils/tubing on the back of your refrigerator (air-cooled condenser) leave 3" clearance at top of refrigerator.

DOOR OPENING

Your refrigerator should be positioned to allow easy access to a counter when removing food. To make this possible, the direction in which the doors open can be reversed. See Door Removal & Reversal Instructions.

NOTE

If your refrigerator is placed with the door hinge side against a wall, you may have to allow additional space so the door can be opened wider.

LEVELING

All four corners of your refrigerator must rest firmly on a solid floor. Your refrigerator is equipped with adjustable front rollers or front leveling screws to help level your unit.

To Level Your Refrigerator:

1. Remove toe grille.
2. Use flat-blade screwdriver or 3/8" socket wrench to adjust front rollers. Use adjustable wrench to adjust leveling screws.

NOTE

Raise the front of the refrigerator enough so the doors close freely when opened halfway. The refrigerator should slope ¼” to ½” from front to back. Then level the refrigerator from side to side.
CONNECTING HOUSEHOLD WATER SUPPLY TO REFRIGERATOR

**WARNING**

To avoid electric shock, which can cause death or severe personal injury, disconnect the refrigerator from electrical power before connecting a water supply line to the refrigerator.

**CAUTION**

To Avoid Property Damage:
- Copper tubing is recommended for the water supply line. Water supply tubing made of ¼” plastic is not recommended since it greatly increases the potential for water leaks. Manufacturer will not be responsible for any damage if plastic tubing is used for supply line.
- DO NOT install water supply tubing in areas where temperatures fall below freezing.
- Chemicals from a malfunctioning softener can damage the ice maker. If the ice maker is connected to soft water, ensure that the softener is maintained and working properly.

**IMPORTANT**

Ensure that your water supply line connections comply with all local plumbing codes.

Before Installing The Water Supply Line, You Will Need
- **Basic Tools:** adjustable wrench, flat-blade screwdriver, and Phillips™ screwdriver
- Access to a household cold water line with water pressure between 30 and 100 psi.
- A water supply line made of ¼ inch (6.4 mm) OD, copper tubing. To determine the length of copper tubing needed, you will need to measure the distance from the ice maker inlet valve at the back of the refrigerator to your cold water pipe. Then add approximately 7 feet (2.1 meters), so the refrigerator can be moved out for cleaning (as shown).
- A shutoff valve to connect the water supply line to your household water system. **DO NOT** use a self-piercing type shutoff valve.
- A compression nut and ferrule (sleeve) for connecting the water supply line to the ice maker inlet valve.

**NOTE**

Water line kit number 5303917950, available from your appliance dealer at additional cost, contains 25 feet (7.6 meters) of ¼ inch OD copper tubing, a saddle type shutoff valve (nonpiercing), (2) ¼ inch brass compression nuts, (2) ferrules/sleeves, and instructions for installing a water supply line.

To Connect Water Supply Line To Ice Maker Inlet Valve
1. Disconnect refrigerator from electric power source.
2. Place end of water supply line into sink or bucket. Turn ON water supply and flush supply line until water is clear. Turn OFF water supply at shutoff valve.
3. Unscrew plastic cap from water valve inlet and discard cap.
4. Slide brass compression nut, then ferrule (sleeve) onto water supply line, as shown.
5. Push water supply line into water valve inlet as far as it will go (¼ inch). Slide ferrule (sleeve) into valve inlet and finger tighten compression nut onto valve. Tighten another half turn with a wrench; **DO NOT** over tighten.
6. With steel clamp and screw, secure water supply line to rear panel of refrigerator as shown.
7. Coil excess water supply line (about 2½ turns) behind refrigerator as shown and arrange coils so they do not vibrate or wear against any other surface.
8. Turn ON water supply at shutoff valve and tighten any connections that leak.
9. Reconnect refrigerator to electrical power source.
10. To turn ice maker on, lower wire signal arm (see ice maker front cover for ON/OFF position of arm).
DOOR REMOVAL / REVERSAL INSTRUCTIONS

1. Remove toe grille.
2. Remove top hinge cover. Trace around the hinge with a soft lead pencil. This makes reinstallation easier. Remove top hinge and lift door off center hinge pin. Set door aside.
3. Unscrew center hinge pin using adjustable wrench and save for reassembly. Ensure plastic washer stays on hinge pin.
4. Lift refrigerator door off of bottom hinge and set aside.
5. Remove center hinge and shim by removing inside screw and loosening two outside screws enough to allow hinge and shim to slide out. Tighten screws.
6. Loosen two outside screws on opposite side of refrigerator, remove inside screw and install center hinge.
7. Remove two screws on bottom hinge with 3/8” socket wrench.
8. Install bottom hinge on opposite side with the two screws removed from step 7.
9. Unscrew bottom hinge pin using adjustable wrench. Move hinge pin to other hole in hinge and tighten with adjustable wrench.
10. Reverse door handles (see instructions on next page).
11. Move freezer and refrigerator door stops to opposite side. Before starting screws, use an awl to puncture the foam.
12. Position refrigerator door onto bottom hinge pin and screw center hinge pin through center hinge into top of door. Close refrigerator door to help align hinge hole.
13. Tighten center hinge pin with adjustable wrench.
14. Remove cabinet and hinge hole plugs and move to opposite side.
15. Lower freezer door onto center hinge pin.
16. Close freezer door. Have an assistant lift up on opposite side of door while tightening screws to install top hinge.
17. Flip toe grille and reinstall.
18. Plug in electrical power cord and turn refrigerator temperature control to center position. Adjust setting as necessary.

DOOR REMOVAL AND REVERSAL INSTRUCTIONS:

NOTE

If you have stainless steel doors -- go to the Removing Stainless Steel Doors and Handles Section on page 7.

The direction in which your refrigerator doors open (door swing) can be reversed, from left to right or right to left, by moving the door hinges from one side to the other. Reversing the door swing should be performed by a qualified person.

IMPORTANT

Before you begin, turn the refrigerator temperature control to “0” and remove the electrical power cord from the wall outlet. Remove any food from door shelves.

1. Remove toe grille.
2. Remove top hinge cover. Trace around the hinge with a soft lead pencil. This makes reinstallation easier. Remove top hinge and lift door off center hinge pin. Set door aside.
3. Unscrew center hinge pin using adjustable wrench and save for reassembly. Ensure plastic washer stays on hinge pin.
4. Lift refrigerator door off of bottom hinge and set aside.
5. Remove center hinge and shim by removing inside screw and loosening two outside screws enough to allow hinge and shim to slide out. Tighten screws.
6. Loosen two outside screws on opposite side of refrigerator, remove inside screw and install center hinge.
7. Remove two screws on bottom hinge with 3/8” socket wrench.
8. Install bottom hinge on opposite side with the two screws removed from step 7.
9. Unscrew bottom hinge pin using adjustable wrench. Move hinge pin to other hole in hinge and tighten with adjustable wrench.
10. Reverse door handles (see instructions on next page).
11. Move freezer and refrigerator door stops to opposite side. Before starting screws, use an awl to puncture the foam.
12. Position refrigerator door onto bottom hinge pin and screw center hinge pin through center hinge into top of door. Close refrigerator door to help align hinge hole.
13. Tighten center hinge pin with adjustable wrench.
14. Remove cabinet and hinge hole plugs and move to opposite side.
15. Lower freezer door onto center hinge pin.
16. Close freezer door. Have an assistant lift up on opposite side of door while tightening screws to install top hinge.
17. Flip toe grille and reinstall.
18. Plug in electrical power cord and turn refrigerator temperature control to center position. Adjust setting as necessary.
TO REMOVE REFRIGERATOR HANDLE:
(Handles may be easier to reverse while doors are off.)
1. Remove two screws attaching handle to top of refrigerator door.
2. Remove two hole plugs and hinge pin plug on top of door and install on opposite side. Use Phillips head screwdriver to remove plastic screw plug from front of door and install on opposite side.

TO ATTACH REFRIGERATOR HANDLE:
1. Reinstall handle on opposite side, using same hole as nameplate.
2. Attach handle to bottom of door.
3. Slide trim piece straight down onto handle bracket.

TO REMOVE FREEZER HANDLE:
(Handles may be easier to reverse while doors are off.)
1. Remove two screws attaching handle to bottom of freezer door.
2. Swing bottom of handle away from the door and slide handle straight up and off of dovetail button.
3. Remove screw and dovetail button and install on other side, using the same holes as nameplate.

TO ATTACH FREEZER HANDLE:
1. Secure side of handle to door and replace button plug.
2. Secure handle to bottom of door.

TRIM REMOVAL (FULL-LENGTH TRIM MODELS ONLY)
In some models, the refrigerator door has a full length trim piece which continues from the bottom of the handle to the bottom of the door. The top of the trim attaches to the handle bracket (Figure 1) or fits around the base of the handle (Figure 2). An adhesive “trim lock” is positioned about halfway down. The bottom of the trim is held in place by either an adhesive trim lock, or a trim lock with two prongs inserted into a hole on the face of the door.

TO REMOVE TRIM:
1. Remove trim by gently pulling trim lock areas out and away from door.
2. When trim is free from door, slide the trim straight down and away from base of handle.

TO ATTACH FREEZER HANDLE:
1. Start with handle offset away from door. Place top of handle over dovetail button, swing handle into an upright position and pull downward, locking it into place.
2. Secure bottom of handle with two screws removed earlier.

NOTE
Some models have “pocket” handles, which are recessed into the sides of the door. On these models, only the hinges will need to be reversed.

TO REMOVE FREEZER HANDLE:
(Handles may be easier to reverse while doors are off.)
1. Remove two screws attaching handle to bottom of freezer door.
2. Remove short trim piece by sliding trim straight up and off of handle bracket.
3. Remove screw attaching top of handle to door.
4. Self-Adhesive Nameplate Models: Gently peel off nameplate from door and reapply over old handle holes.

TO ATTACH FREEZER HANDLE:
1. Reinstall handle on opposite side, using same hole as nameplate.
2. Attach handle to bottom of door.
3. Slide trim piece straight down onto handle bracket.

TO ATTACH FREEZER HANDLE:
1. Secure side of handle to door and replace button plug.
2. Secure handle to bottom of door.

TO REMOVE FREEZER HANDLE:
(Handles may be easier to reverse while doors are off.)
1. Remove two screws attaching handle to bottom of freezer door.
2. Swing bottom of handle away from the door and slide handle straight up and off of dovetail button.
3. Remove screw and dovetail button and install on other side, using the same holes as nameplate.

4. Self-Adhesive Nameplate Models: Use putty knife to gently peel off nameplate from door and reapply over old handle holes.

TO ATTACH FREEZER HANDLE:
1. Start with handle offset away from door. Place top of handle over dovetail button, swing handle into an upright position and pull downward, locking it into place.
2. Secure bottom of handle with two screws removed earlier.

NOTE
For models with short handle trim, remove by sliding trim straight down and off of handle bracket.

TO REMOVE REFRIGERATOR HANDLE:
(Handles may be easier to reverse while doors are off.)

Figure 1 Style Handles
1. Remove two screws attaching handle to top of refrigerator door.
2. Remove screw attaching bottom of handle to door.
3. Remove two hole plugs and hinge pin plug on top of door and install on opposite side. Use Phillips head screwdriver to remove plastic screw plug from front of door and install on opposite side.

Figure 2 Style Handles
1. Remove two screws attaching handle to top of refrigerator door.
2. Swing top of handle away from door and slide handle down and off of dovetail button.
3. Remove screw and dovetail button and install on other side, moving hole plugs from corresponding holes to opposite side.

**TO ATTACH REFRIGERATOR HANDLE:**

**Figure 1 Style Handles**
1. Secure bottom of handle with screws.
2. Secure top of handle with screws.

**Figure 2 Style Handles**
1. Start with handle offset away from door. Place bottom of handle over dovetail button, swing handle into an upright position and pull upward, locking it into place.
2. Secure top of handle with screws.

**TO ATTACH TRIM:**
1. Slide both trim locks out of trim.
2. Insert new adhesive trim locks contained in your literature pack.
3. Install trim to handle by sliding under base of handle. Carefully align trim and press down at trim lock locations.
4. Use rubbing alcohol to remove any adhesive residue from old trim lock locations.

**TO REMOVE REFRIGERATOR HANDLE:**
(Handles may be easier to reverse while doors are off.)
1. Remove two screws attaching handle to top of refrigerator door.
2. Remove button plug using edge of putty knife.
3. Remove screw on side of refrigerator door and remove handle.
4. Reverse freezer and refrigerator handles as shown in figure 3.

**TO ATTACH REFRIGERATOR HANDLE:**
1. Secure side of handle to door and replace plug button.
2. Secure handle to top of door.

**NOTE**
Trim lock must be removed and installed by sliding over the two donut shaped areas.

---

**REMOVING STAINLESS STEEL DOORS AND HANDLES**

**CAUTION**
Use care when using tools near surface of stainless steel doors to avoid scratching.

**To Remove Doors**
Stainless steel doors are not reversible. Follow these steps to remove doors.
1. Remove toe grille and top hinge cover.
2. Remove top hinge and lift freezer door off of center hinge pin. Set door aside.
3. Unscrew center hinge bin using adjustable wrench and save for reassembly. Ensure plastic washer stays on hinge pin.
4. Lift refrigerator door off of bottom hinge and set aside.
5. Remove center hinge and shim by removing inside screw and loosening two outside screws enough to allow hinge to slide out.
6. Remove bottom hinge. Reinsert two outside screws in holes and tighten.
7. Reverse steps 1 - 6 to reinstall doors

**To Remove Handles**
1. Firmly hold freezer handle while loosening set screws with 3/32" allen wrench. Remove freezer handle.
2. Repeat step 1 for refrigerator door.
**COOL DOWN PERIOD**

To ensure safe food storage, allow the refrigerator to operate with the doors closed for at least 8 to 12 hours before loading it with food.

**REFRIGERATOR & FREEZER CONTROLS**

**NOTE**

When making changes to the temperature controls, wait 24 hours for the temperature to stabilize before making additional changes.

**NOTE**

When first turning refrigerator on, move refrigerator and freezer controls to *Normal*. This is the recommended initial setting. After 24 hours, adjust the controls as needed.

**TEMPERATURE ADJUSTMENT**

- Adjust temperature gradually: move the knob in small increments, allowing the temperature to stabilize.
- For colder temperatures, turn the knob towards Colder.
- For warmer temperatures, turn the knob towards Cold.

Turning the refrigerator control will change temperatures in both compartments. For example, if the refrigerator control is turned to a colder setting, the freezer control may have to be adjusted to a warmer setting. Turning the freezer control will change only the freezer temperature.

To maintain temperatures, a fan circulates air in the refrigerator and freezer compartments. For good circulation, do not block cold air vents with food items.

* IMPORTANT

Turning the refrigerator temperature control to “0” turns off the compressor and prevents the refrigerator from cooling, but does not disconnect the power to the light bulb and other electrical components. To turn off power to your refrigerator, you must unplug the power cord from the wall outlet.

ICE SERVICE

If your refrigerator has an automatic ice maker, it will provide a sufficient supply of ice for normal use. During the initial startup of your refrigerator, no ice will be produced during the first 24 hours of operation. Air in new plumbing lines may cause the ice maker to cycle two or three times before making a full tray of ice. With no usage, it will take approximately one to two days to fill the ice container.

New plumbing connections may cause the first production of ice cubes to be discolored or have an odd flavor. Discard ice made during the first 24 hours.

NOTE

NOTE: Automatic ice makers are also optional accessories that may be installed in most models at any time. Call your local dealer for information.

TURNING YOUR ICE MAKER ON

After the plumbing connections have been completed, the water supply valve must be opened. Place the ice container under the ice maker, pushing it as far back as possible. Lower the wire signal arm to its “down” or ON position.

TURNING YOUR ICE MAKER OFF

To stop the ice maker, lift the wire signal arm until it clicks and locks in the “up” or OFF position. The ice maker also turns off automatically when the ice container is full. If your model has an adjustable freezer shelf, place the shelf in the lower position, so that the wire signal arm will hit the ice when the container is full.

CAUTION

Chemicals from a malfunctioning softener can damage the ice maker. If the ice maker is connected to soft water, ensure that the softener is maintained and working properly.

IMPORTANT

Your ice maker is shipped from the factory with the wire signal arm in the ON position. To ensure proper function of your ice maker, hook up water supply immediately or turn ice maker OFF by lifting the wire signal arm until it clicks and locks in the UP position. If the ice maker is not turned off and the water supply is not connected, the water valve will make a loud chattering noise.

ICE PRODUCTION: WHAT TO EXPECT

The ice maker will produce 2.5 to 3 pounds of ice every 24 hours depending on usage conditions. Ice is produced at a rate of 8 cubes every 80 to 160 minutes.

CAUTION

DO NOT place the ice container in your dishwasher.
NORMAL OPERATING SOUNDS & SIGHTS

UNDERSTANDING THE SOUNDS YOU MAY HEAR

Your new high-efficiency refrigerator may make unfamiliar sounds. These are all normal sounds and soon will become familiar to you. They also indicate your refrigerator is operating as designed. Hard surfaces, such as vinyl or wood floors, walls, and kitchen cabinets may make sounds more noticeable. Listed below are descriptions of some of the most common sounds you may hear, and what is causing them.

A. Evaporator
   The flow of refrigerant through the evaporator may create a boiling or gurgling sound.

B. Evaporator Fan
   You may hear air being forced through the refrigerator by the evaporator fan.

C. Defrost Heater
   During defrost cycles, water dripping onto the defrost heater may cause a hissing or sizzling sound. After defrosting, a popping sound may occur.

D. Automatic Ice Maker
   If your refrigerator is equipped with an automatic ice maker, you will hear ice cubes falling into the ice bin.

E. Cold Control & Defrost Timer or Automatic Defrost Control
   These parts can produce a snapping or clicking sound when turning the refrigerator on and off. The timer also produces sounds similar to an electric clock.

F. Condenser Fan
   If condenser coils are located underneath your refrigerator as shown in the drawing at the left, you have a condenser fan. You may hear air being forced through the condenser by the condenser fan.

G. Compressor
   Modern, high-efficiency compressors operate much faster than older models. The compressor may have a high-pitched hum or pulsating sound.

H. Water Valve
   If your refrigerator is equipped with an automatic ice maker, you will hear a buzzing sound as the water valve opens to fill the ice maker during each cycle.

I. Drain Pan (Nonremovable)
   You may hear water running into the drain pan during the defrost cycle. The drain pan will be located on top of the compressor for air-cooled condensers (black coils on back of refrigerator).

J. Condenser Coils (Fan-cooled models only)

CARE & CLEANING

REPLACING THE FREEZER LIGHT BULB (SOME MODELS)

Avoid cuts when replacing light bulbs, wear gloves.

1. Unplug refrigerator.
2. Wear gloves as protection against possible broken glass.
3. Unsnap light shield as shown.
4. Unscrew and replace old bulb with an appliance bulb of the same wattage.
5. Replace light shield.
6. Remember to plug the refrigerator back in.

NEVER CLEAN CONDENSER (SOME MODELS)

If your refrigerator is equipped with a Never Clean condenser, there’s no need to clean the condenser under normal operating conditions. If the refrigerator is operated under particularly dusty or greasy conditions, or if there is significant pet traffic in your home, it may be necessary to periodically clean the condenser for maximum efficiency.

NOTE

Rigid foam insulation is very energy efficient, but is not a sound insulator.

IMPORTANT

During the automatic defrost cycle, you may notice a red glow in the vents on the back wall of your freezer compartment. This is normal during the defrost cycle.

Defrost Water Pan (some models)
Keep your refrigerator and freezer clean to prevent odor build-up. Wipe up any spills immediately and clean both sections at least twice a year. Never use any type of scouring pads, brushes, abrasive cleaners or strong alkaline solutions on any surface. Do not wash any removable parts in a dishwasher. **Always unplug the electrical power cord from the wall outlet before cleaning.**

### CAUTION
- When moving the refrigerator, pull straight out. Do not shift the refrigerator from side to side as this may tear or gouge the floor covering. If the refrigerator has an automatic ice maker, be careful not to move the refrigerator beyond the plumbing connections.
- Damp objects stick to cold metal surfaces. Do not touch refrigerated surfaces with wet or damp hands.
- Never use CHLORIDE to clean stainless steel.

### NOTE
- Turning the refrigerator temperature control to “0” turns off the compressor, but does not disconnect electrical power to the light bulb or other electrical components. To turn off power to your refrigerator, you must unplug the power cord from the wall outlet.
- Do not use razor blades or other sharp instruments which can scratch the appliance surface when removing adhesive labels. Any glue left from tape or labels can be removed with a mixture of warm water and mild detergent, or, touch the glue residue with the sticky side of tape you have already removed. Do not remove the serial plate.

**DISCLAIMER OF IMPLIED WARRANTIES; LIMITATION OF REMEDIES**

CUSTOMER’S SOLE AND EXCLUSIVE REMEDY UNDER THIS LIMITED WARRANTY SHALL BE PRODUCT REPAIR OR REPLACEMENT AS PROVIDED HEREIN. CLAIMS BASED ON IMPLIED WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO ONE YEAR OR THE SHORTEST PERIOD ALLOWED BY LAW, BUT NOT LESS THAN ONE YEAR. ELECTROLUX SHALL NOT BE LIABLE FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES SUCH AS PROPERTY DAMAGE AND INCIDENTAL EXPENSES RESULTING FROM ANY BREACH OF THIS WRITTEN LIMITED WARRANTY OR ANY IMPLIED WARRANTY. SOME STATES AND PROVINCES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, OR LIMITATIONS ON THE DURATION OF IMPLIED WARRANTIES, SO THESE LIMITATIONS OR EXCLUSIONS MAY NOT APPLY TO YOU. THIS WRITTEN WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS. YOU MAY ALSO HAVE OTHER RIGHTS THAT VARY FROM STATE TO STATE.

If You Need Service
Keep your receipt, delivery slip, or some other appropriate payment record to establish the warranty period should service be required. If service is performed, it is in your best interest to obtain and keep all receipts. Service under this warranty must be obtained by contacting Electrolux at the addresses or phone numbers below.

This warranty only applies in the USA and Canada. In the USA, your appliance is warranted by Electrolux Major Appliances North America, a division of Electrolux Home Products, Inc. In Canada, your appliance is warranted by Electrolux Canada Corp. Electrolux authorizes no person to change or add to any obligations under this warranty. Obligations for service and parts under this warranty must be performed by Electrolux or an authorized service company. Product features or specifications as described or illustrated are subject to change without notice.
