**Important Safety Instructions**

**Warning**
Please read all instructions before using this refrigerator.

**For your Safety**
- Do NOT store or use gasoline, or other flammable liquids in the vicinity of this or any other appliance. Read product labels for warnings regarding flammability and other hazards.
- Do NOT operate the refrigerator in the presence of explosive fumes.
- Avoid contact with any moving parts of an automatic ice maker.
- Remove all staples from the carton. Staples can cause severe cuts, and also destroy finishes if they come in contact with other appliances or furniture.

**Definitions**
- This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

**Danger**
DANGER indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

**Warning**
WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

**Caution**
CAUTION indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

**Important**
IMPORTANT indicates installation, operation or maintenance information which is important but not hazard-related.

**Installation Checklist**

**Doors**
- Handles are secure and tight
- Door seals completely to cabinet on all sides
- Freezer door is level across the top

**Leveling**
- Refrigerator is level, side-to-side and tilted 1/4” (6mm) front-to-back
- Toe grille is properly attached to refrigerator
- Cabinet is setting solid on all corners

**Electrical Power**
- House power turned on
- Refrigerator plugged in

**Ice Maker**
- House water supply connected to refrigerator
- No water leaks present at all connections - recheck in 24 hours
- Ice maker is turned ON
- Ice & water dispenser operates correctly
- Front filter must be flush with filter housing (select models)

**Final Checks**
- Shipping material removed
- Fresh food and freezer temperatures set
- Crisper humidity controls set
- Registration card sent in
**IMPORTANT SAFETY INSTRUCTIONS**

**Child Safety**
Destroy or recycle the carton, plastic bags, and any exterior wrapping material immediately after the refrigerator is unpacked. Children should **NEVER** use these items to play. Cartons covered with rugs, bedspreads, plastic sheets or stretch wrap may become airtight chambers, and can quickly cause suffocation.

**Proper Disposal of your Refrigerator or Freezer**

**Risk of child entrapment**
Child entrapment and suffocation are not problems of the past. Junked or abandoned refrigerators or freezers are still dangerous – even if they will sit for “just a few days”. If you are getting rid of your old refrigerator or freezer, please follow the instructions below to help prevent accidents.

**Proper Disposal of Refrigerators/Freezers**
We strongly encourage responsible appliance recycling/disposal methods. Check with your utility company or visit www.recyclemyoldfridge.com for more information on recycling your old refrigerator.

**Before you throw away your old refrigerator/freezer:**
- Remove doors.
- Leave shelves in place so children may not easily climb inside.
- Have refrigerant removed by a qualified service technician.

**WARNING**
These guidelines must be followed to ensure that safety mechanisms in this refrigerator will operate properly.

**Electrical information**
- **The refrigerator must be plugged into its own dedicated 115 Volt, 60 Hz., 15 Amp, AC only electrical outlet.** The power cord of the appliance is equipped with a three-prong grounding plug for your protection against electrical shock hazards. It must be plugged directly into a properly grounded three prong receptacle. The receptacle must be installed in accordance with local codes and ordinances. Consult a qualified electrician. Avoid connecting refrigerator to a Ground Fault Interruptor (GFI) circuit. **Do not use an extension cord or adapter plug.**
- If the power cord is damaged, it should be replaced by an authorized service technician to prevent any risk.
- Never unplug the refrigerator by pulling on the power cord. Always grip the plug firmly, and pull straight out from the receptacle to prevent damaging the power cord.
- Unplug the refrigerator before cleaning and before replacing a light bulb to prevent electrical shock.
- Performance may be affected if the voltage varies by 10% or more. Operating the refrigerator with insufficient power can damage the compressor. Such damage is not covered under your warranty.
- Do not plug the unit into an electrical outlet controlled by a wall switch or pull cord to prevent the refrigerator from being turned off accidentally.

**IMPORTANT**
Pressing and holding the On/Off button for three (3) seconds, located on the left side of the temperature control panel (Electronic controls), or turning the Freezer and Fresh Food controls to “0” (Mechanical controls) will disable your refrigerator’s cooling system, but does not disconnect the power to the light bulb and other electrical components. To turn off power to your refrigerator you must unplug the power cord from the electrical outlet.

**CAUTION**
To avoid personal injury or property damage, handle tempered glass shelves carefully. Shelves may break suddenly if nicked, scratched, or exposed to sudden temperature change.
INSTALLATION

This Use & Care Guide provides general operating instructions for your model. Use the refrigerator only as instructed in this Use & Care Guide. Before starting the refrigerator, follow these important first steps.

Location

- Choose a place that is near a grounded electrical outlet. Do Not use an extension cord or an adapter plug.
- If possible, place the refrigerator out of direct sunlight and away from the range, dishwasher or other heat sources.
- The refrigerator must be installed on a floor that is level and strong enough to support a fully loaded refrigerator.
- Consider water supply availability for models equipped with an automatic ice maker. If you do not hook up water to the refrigerator, remember to turn the ice maker off.

**CAUTION**

Do Not install the refrigerator where the temperature will drop below 55°F (13°C) or rise above 110°F (43°C). The compressor will not be able to maintain proper temperatures inside the refrigerator.

Do Not block the toe grille on the lower front of your refrigerator. Sufficient air circulation is essential for the proper operation of your refrigerator.

Installation

Installation clearances

- Allow the following clearances for ease of installation, proper air circulation, and plumbing and electrical connections:
  - Sides & Top: 3/8 inch
  - Back: 1 inch

**NOTE**

If your refrigerator is placed with the door hinge side against a wall, you may have to allow additional space so the door can be opened wider.

Leveling

All four corners of your refrigerator must rest firmly on a solid floor. Your refrigerator is equipped with adjustable front rollers or front leveling screws to help level your unit.

To level your refrigerator:

1. Remove toe grille.
2. Use flat-blade screwdriver or 3/8” socket wrench to adjust front rollers. Use adjustable wrench to adjust leveling screws.

NOTE

Raise the front of the refrigerator enough so the doors close freely when opened halfway. The refrigerator should slope 1/4” to 1/2” from front to back. Then level the refrigerator from side-to-side.
The direction in which your refrigerator doors open (door swing) can be reversed, from left to right or right to left, by moving the door hinges from one side to the other. Reversing the door swing should be performed by a qualified person.

**IMPORTANT**
Before you begin, turn the refrigerator temperature control to “0” and remove the electrical power cord from the wall outlet. Remove any food from door shelves.

**Door removal and reversal instructions:**

1. Remove toe grille.
2. Remove top hinge cover. Trace around the hinge with a soft lead pencil. This makes reinstallation easier. Remove top hinge and lift door off center hinge pin. Set door aside.
3. Unscrew center hinge pin using adjustable wrench and save for reassembly. Ensure plastic washer stays on hinge pin.
4. Lift refrigerator door off of bottom hinge and set aside.
5. Remove center hinge and shim by removing inside screw and loosening two outside screws enough to allow hinge and shim to slide out. Tighten screws.
6. Loosen two outside screws on opposite side of refrigerator, remove inside screw and install center hinge.
7. Remove two screws on bottom hinge with 3/8” socket wrench.
8. Install bottom hinge on opposite side with the two screws removed from step 7.
9. Unscrew bottom hinge pin using adjustable wrench. Move hinge pin to other hole in hinge and tighten with adjustable wrench.
10. Reverse door handles (see instruction on next page).
11. Move freezer and refrigerator door stops to opposite side. Before starting screws, use an awl to puncture the foam.
12. Position refrigerator door onto bottom hinge pin and screw center hinge pin through center hinge into top of door. Close refrigerator door to help align hinge hole.
13. Tighten center hinge pin with adjustable wrench.
14. Remove cabinet and hinge hole plugs and move to opposite side.
15. Lower freezer door onto center hinge pin.
16. Close freezer door. Have an assistant lift up on opposite side of door while tightening screws to install top hinge.
17. Flip toe grille and reinstall.
18. Plug in electrical power cord and turn refrigerator temperature control to center position. Adjust setting as necessary.
IMPORTANT
To ensure proper installation of handles, please review these instructions and illustrations thoroughly prior to installing the handles. Additionally, before installing the door handles, make sure the door swing is correct. Your model will have either a right hand or left hand door swing. Follow instructions in the Use & Care Guide to reverse the doors, if necessary.

To attach refrigerator handle:
1. Place rounded part of handle onto shoulder screw on face of door and align the two (2) holes in top of handle with the two (2) holes in top of door. **Do not tighten the set screw yet.**
2. Install the two (2) screws into the top of the handle.
3. Tighten the set screw on the rounded part of the handle until the handle is flush with the door, then tighten another 1/2 turn.

**CAUTION**
Wear gloves and use extreme CAUTION when installing these handles. The rounded end of the handles may be sharp.

To attach freezer handle:
1. Place rounded part of handle onto shoulder screw on face of door and align the two (2) holes in bottom of handle with the two (2) holes in bottom of door. **Do not tighten the set screw yet.**
2. Install the two (2) screws into the bottom of the handle.

To reverse refrigerator/freezer handles:
Handles may be easier to reverse while doors are off. Reverse freezer and refrigerator handles as shown.

**CAUTION**
Be sure doors are set aside in a secure position where they cannot fall and cause personal injury.
WARNING

To avoid electric shock, which can cause death or severe personal injury, disconnect the refrigerator from electrical power before connecting a water supply line to the refrigerator.

CAUTION

To avoid property damage:

• Copper tubing is recommended for the water supply line. Water supply tubing made of 1/4” plastic is not recommended since it greatly increases the potential for water leaks. Manufacturer will not be responsible for any damage if plastic tubing is used for supply line.
• DO NOT install water supply tubing in areas where temperatures fall below freezing.
• Chemicals from a malfunctioning softener can damage the ice maker. If the ice maker is connected to soft water, ensure that the softener is maintained and working properly.

What you will need:

• A cold water line with pressure of 30-100 psi. (System is to be supplied with cold water only.)
• Copper tubing with ¼ inch (6.4mm) Outside Diameter (OD). Length for this tubing is the distance from the rear of the refrigerator to your household water supply line plus seven (7) feet (2.1 meters).
• A shut-off valve for the connection between your household water line and the refrigerator supply line.
• A compression nut and ferrule (sleeve) for the water supply connection at the rear of your refrigerator.

NOTE

A kit is available from your dealer that provides all materials for a water supply installation, including 25 feet of copper tubing and full instructions.

IMPORTANT

Ensure that your water supply line connections comply with all local plumbing codes.

To connect the water supply line to ice maker inlet valve:

1. Disconnect refrigerator from electric power source.
2. Place end of water supply line into sink or bucket. Turn ON water supply and flush supply line until water is clear. Turn OFF water supply at shutoff valve.
3. Remove the plastic cap from the water valve inlet and discard the cap.
4. Slide the brass compression nut, then the ferrule (sleeve) onto water supply line.
5. Push the water supply line into the water valve inlet as far as it will go (¼ inch).
6. Slide the ferrule (sleeve) into the valve and finger-tighten the compression nut onto valve. Tighten another half turn with a wrench. Do not over-tighten.
7. Secure the copper tube to your refrigerator’s rear panel with a steel clamp and screw (see illustration).
8. Coil the excess water supply line (about 2½ turns) behind your refrigerator as shown. Arrange coiled tubing to avoid vibration or wear against other surfaces.
9. Turn ON water supply shut-off valve and tighten any connections that leak.
10. To turn ice maker on, lower wire signal arm (see ice maker front cover for ON/OFF position of arm).

NOTE

After connecting the water supply, refer to “How to Prime the Water Supply System” for important information about priming an empty water supply system.

Your refrigerator’s water supply system includes several tubing lines, a water filter, a water valve and a water tank. To ensure that your water dispenser works properly, this system must be completely filled with water when your refrigerator is first connected to the household water supply line.
**ICE SERVICE**

If your refrigerator has an automatic ice maker, no ice will be produced during the first 24 hours of operation. Air in new plumbing lines may cause the ice maker to cycle two or three times before making a full tray of ice. With no usage, it will take approximately one to two days to fill the ice container.

New plumbing connections may cause the first production of ice cubes to be discolored or have an odd flavor. Discard ice made during the first 24 hours.

**NOTE**

Automatic ice makers are also optional accessories that may be installed in most models at any time. Call your local dealer for information.

**Turning your Ice Maker On**

After the plumbing connections have been completed, the water supply valve must be opened. Place the ice container under the ice maker, pushing it as far back as possible. Lower the wire signal arm to its “down” or ON position.

**Turning your Ice Maker Off**

To stop the ice maker, lift the wire signal arm until it clicks and locks in the “up” or OFF position. The ice maker also turns off automatically when the ice container is full.

**IMPORTANT**

Your ice maker is shipped from the factory with the wire signal arm in the ON position. To ensure proper function for your ice maker, hook up water supply immediately or turn ice maker OFF by lifting the wire signal arm until it clicks and locks in the UP position. **If the ice maker is not turned off and the water supply is not connected, the water valve will make a loud chattering noise.**

**Cool Down Period**

To ensure safe food storage, allow the refrigerator to operate with the doors closed for at least 8 to 12 hours before loading it with food.

**Refrigerator & Freezer Controls**

**NOTE**

When first turning refrigerator on, move refrigerator and freezer controls to Normal. This is the recommended initial setting. After 24 hours, adjust the controls as needed.

**Temperature Adjustment**

- Adjust temperature gradually: move the knob in small increments, allowing the temperature to stabilize.

Turning the refrigerator control will change temperatures in both compartments. For example, if the refrigerator control is turned to a colder setting, the freezer control may have to be adjusted to a warmer setting. Turning the freezer control will change only the freezer temperature.

To maintain temperatures, a fan circulates air in the refrigerator and freezer compartments. For good circulation, do not block cold air vents with food items.

**IMPORTANT**

Turning the refrigerator temperature control to “0” turns off the compressor and prevents the refrigerator from cooling, but does not disconnect the power to the light bulb and other electrical components. To turn off power to your refrigerator, you must unplug the power cord from the wall outlet.

**ICE SERVICE**

 Turning the refrigerator temperature control to “0” turns off the compressor and prevents the refrigerator from cooling, but does not disconnect the power to the light bulb and other electrical components. To turn off power to your refrigerator, you must unplug the power cord from the wall outlet.

**Cool Down Period**

To ensure safe food storage, allow the refrigerator to operate with the doors closed for at least 8 to 12 hours before loading it with food.

**Refrigerator & Freezer Controls**

**NOTE**

When first turning refrigerator on, move refrigerator and freezer controls to Normal. This is the recommended initial setting. After 24 hours, adjust the controls as needed.

**Temperature Adjustment**

- Adjust temperature gradually: move the knob in small increments, allowing the temperature to stabilize.

Turning the refrigerator control will change temperatures in both compartments. For example, if the refrigerator control is turned to a colder setting, the freezer control may have to be adjusted to a warmer setting. Turning the freezer control will change only the freezer temperature.

To maintain temperatures, a fan circulates air in the refrigerator and freezer compartments. For good circulation, do not block cold air vents with food items.

**IMPORTANT**

Turning the refrigerator temperature control to “0” turns off the compressor and prevents the refrigerator from cooling, but does not disconnect the power to the light bulb and other electrical components. To turn off power to your refrigerator, you must unplug the power cord from the wall outlet.
Understanding the Sounds you may Hear

Your new, high-efficiency refrigerator may introduce unfamiliar sounds. These sounds normally indicate your refrigerator is operating correctly. Some surfaces on floors, walls, and kitchen cabinets may make these sounds more noticeable.

**NOTE**

Rigid foam insulation is very energy efficient, but is not a sound insulator.

Following is a list of major components in your refrigerator and the sounds they can cause:

A **Evaporator** Refrgradient through the evaporator may create a boiling or gurgling sound.

B **Evaporator fan** You may hear air being forced through the refrigerator by the evaporator fan.

C **Defrost heater** During defrost cycles, water dripping onto the defrost heater may cause a hissing or sizzling sound. After defrosting, a popping sound may occur.

D **Automatic ice maker** When ice has been produced, you will hear ice cubes falling into the ice bin. The icemaker will produce 2.5 to 3 pounds of ice every 24 hours depending on usage conditions.

E **Electronic control & automatic defrost control** These parts can produce a snapping or clicking sound when turning the cooling system on and off.

F **Condenser fan** You may hear air being forced through the condenser.

G **Compressor** Modern, high-efficiency compressors run much faster than in the past. The compressor may have a high-pitched hum or pulsating sound.

H **Water valve** Makes a buzzing sound each time it opens to fill the ice maker.

I **Drain pan** (not removable) You may hear water dripping into the drain pan during the defrost cycle.

J **Condenser** May create minimal sounds from forced air.

**IMPORTANT**

During the automatic defrost cycle, you may notice a red glow in the vents on the back wall of your freezer compartment. This is normal during the defrost cycle.
CARE & CLEANING

Protecting your investment
Keeping your refrigerator clean maintains appearance and prevents odor build-up. Wipe up any spills immediately and clean the freezer and fresh food compartments at least twice a year. When cleaning, take the following precautions:

- Never use CHLORIDE or cleaners with bleach to clean stainless steel.
- Do not wash any removable parts in a dishwasher.
- Always unplug the electrical power cord from the wall outlet before cleaning.
- Remove adhesive labels by hand. Do not use razor blades or other sharp instruments which can scratch the appliance surface.
- Do not remove the serial plate.

Do not use abrasive cleaners such as window sprays, scouring cleansers, brushes, flammable fluids, cleaning waxes, concentrated detergents, bleaches or cleaners containing petroleum products on plastic parts, interior doors, gaskets or cabinet liners. Do not use paper towels, metallic scouring pads, or other abrasive cleaning materials or strong alkaline solutions.

NOTE
If you set your temperature controls to turn off cooling, power to lights and other electrical components will continue until you unplug the power cord from the wall outlet.

CAUTION
- Pull the refrigerator straight out to move it. Shifting it from side to side may damage flooring. Be careful not to move the refrigerator beyond the plumbing connections.
- Damp objects stick to cold metal surfaces. Do not touch refrigerated surfaces with wet or damp hands.

IMPORTANT
If you store or move your refrigerator in freezing temperatures, be sure to completely drain the water supply system. Failure to do so could result in water leaks when the refrigerator is put back into service. Contact a service representative to perform this operation.

</table>
Your appliance is covered by a one year limited warranty. For one year from your original date of purchase, Electrolux will pay all costs for repairing or replacing any parts of this appliance that prove to be defective in materials or workmanship when such appliance is installed, used and maintained in accordance with the provided instructions.

Exclusions  This warranty does not cover the following:

1. Products with original serial numbers that have been removed, altered or cannot be readily determined.
2. Product that has been transferred from its original owner to another party or removed outside the USA or Canada.
3. Rust on the interior or exterior of the unit.
4. Products purchased "as-is" are not covered by this warranty.
5. Food loss due to any refrigerator or freezer failures.
6. Products used in a commercial setting.
7. Service calls which do not involve malfunction or defects in materials or workmanship, or for appliances not in ordinary household use or used other than in accordance with the provided instructions.
8. Service calls to correct the installation of your appliance or to instruct you how to use your appliance.
9. Expenses for making the appliance accessible for servicing, such as removal of trim, cupboards, shelves, etc., which are not a part of the appliance when it is shipped from the factory.
10. Service calls to repair or replace appliance light bulbs, air filters, water filters, other consumables, or knobs, handles, or other cosmetic parts.
11. Surcharges including, but not limited to, any after hour, weekend, or holiday service calls, tolls, ferry trip charges, or mileage expense for service calls to remote areas, including the state of Alaska.
12. Damages to the finish of appliance or home incurred during installation, including but not limited to floors, cabinets, walls, etc.
13. Damages caused by: services performed by unauthorized service companies; use of parts other than genuine Electrolux parts or parts obtained from persons other than authorized service companies; or external causes such as abuse, misuse, inadequate power supply, accidents, fires, or acts of God.

DISCLAIMER OF IMPLIED WARRANTIES; LIMITATION OF REMEDIES

CUSTOMER'S SOLE AND EXCLUSIVE REMEDY UNDER THIS LIMITED WARRANTY SHALL BE PRODUCT REPAIR OR REPLACEMENT AS PROVIDED HEREIN. CLAIMS BASED ON IMPLIED WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO ONE YEAR OR THE SHORTEST PERIOD ALLOWED BY LAW, BUT NOT LESS THAN ONE YEAR. ELECTROLUX SHALL NOT BE LIABLE FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES SUCH AS PROPERTY DAMAGE AND INCIDENTAL EXPENSES RESULTING FROM ANY BREACH OF THIS WRITTEN LIMITED WARRANTY OR ANY IMPLIED WARRANTY. SOME STATES AND PROVINCES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, OR LIMITATIONS ON THE DURATION OF IMPLIED WARRANTIES, SO THESE LIMITATIONS OR EXCLUSIONS MAY NOT APPLY TO YOU. THIS WRITTEN WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS. YOU MAY ALSO HAVE OTHER RIGHTS THAT VARY FROM STATE TO STATE.

If You Need Service  Keep your receipt, delivery slip, or some other appropriate payment record to establish the warranty period should service be required. If service is performed, it is in your best interest to obtain and keep all receipts. Service under this warranty must be obtained by contacting Electrolux at the addresses or phone numbers below.

This warranty only applies in the USA and Canada. In the USA, your appliance is warranted by Electrolux Major Appliances North America, a division of Electrolux Home Products, Inc. In Canada, your appliance is warranted by Electrolux Canada Corp. Electrolux authorizes no person to change or add to any obligations under this warranty. Obligations for service and parts under this warranty must be performed by Electrolux or an authorized service company. Product features or specifications as described or illustrated are subject to change without notice.
