**IMPORTANT SAFETY INSTRUCTIONS**

**WARNING**
Please read all instructions before using this refrigerator.

For your Safety
- DO NOT store or use gasoline, or other flammable liquids in the vicinity of this or any other appliance. Read product labels for warnings regarding flammability and other hazards.
- DO NOT operate the refrigerator in the presence of explosive fumes.
- Avoid contact with any moving parts of automatic ice maker.
- Remove all staples from the carton. Staples can cause severe cuts, and also destroy finishes if they come in contact with other appliances or furniture.

Definitions
- This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

**DANGER**
DANGER indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

**WARNING**
WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

**CAUTION**
CAUTION indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

**IMPORTANT**
IMPORTANT indicates installation, operation or maintenance information which is important but not hazard-related.

**Installation Checklist**

**Doors**
- Handles are secure and tight
- Door seals completely to cabinet on all sides
- Freezer drawer is level across the top

**Leveling**
- Refrigerator is level, side-to-side and tilted 1/4 inch (6 mm) front-to-back
- Toe grille is properly attached to refrigerator
- Cabinet is setting solid on all corners

**Electrical Power**
- House power turned on
- Refrigerator plugged in

**Ice Maker (select models)**
- House water supply connected to refrigerator
- No water leaks present at all connections - recheck in 24 hours
- Ice maker is turned ON

**Final Checks**
- Shipping material removed
- Fresh food and freezer temperatures set
- Crisper humidity controls set
- Registration card sent in
IMPORTANT SAFETY INSTRUCTIONS

Child Safety
Destroy or recycle the carton, plastic bags, and any exterior wrapping material immediately after the refrigerator is unpacked. Children should NEVER use these items to play. Cartons covered with rugs, bedspreads, plastic sheets or stretch wrap may become airtight chambers, and can quickly cause suffocation.

Proper Disposal of your Refrigerator or Freezer

Risk of child entrapment
Child entrapment and suffocation are not problems of the past. Junked or abandoned refrigerators or freezers are still dangerous – even if they will sit for “just a few days”. If you are getting rid of your old refrigerator or freezer, please follow the instructions below to help prevent accidents.

Proper Disposal of Refrigerators/Freezers
We strongly encourage responsible appliance recycling/disposal methods. Check with your utility company or visit www.energystar.gov/recycle for more information on recycling your old refrigerator.

Before you throw away your old refrigerator/freezer:

- Remove doors.
- Leave shelves in place so children may not easily climb inside.
- Have refrigerant removed by a qualified service technician.

WARNING
These guidelines must be followed to ensure that safety mechanisms in this refrigerator will operate properly.

Electrical information

- The refrigerator must be plugged into its own dedicated 115 Volt, 60 Hz., 15 Amp, AC only electrical outlet. The power cord of the appliance is equipped with a three-prong grounding plug for your protection against electrical shock hazards. It must be plugged directly into a properly grounded three prong receptacle. The receptacle must be installed in accordance with local codes and ordinances. Consult a qualified electrician. Avoid connecting refrigerator to a Ground Fault Interrupter (GFI) circuit. Do not use an extension cord or adapter plug.
- If the power cord is damaged, it should be replaced by an authorized service technician to prevent any risk.
- Never unplug the refrigerator by pulling on the power cord. Always grip the plug firmly, and pull straight out from the receptacle to prevent damaging the power cord.
- Unplug the refrigerator before cleaning and before replacing a light bulb to avoid electrical shock.
- Performance may be affected if the voltage varies by 10% or more. Operating the refrigerator with insufficient power can damage the compressor. Such damage is not covered under your warranty.
- Do not plug the unit into an electrical outlet controlled by a wall switch or pull cord to prevent the refrigerator from being turned off accidentally.

CAUTION
To avoid personal injury or property damage, handle tempered glass shelves carefully. Shelves may break suddenly if nicked, scratched, or exposed to sudden temperature change.
*Features may vary according to model

Frigidaire Models (with swing door freezer)

- Control Panel
- Incandescent Light (fresh food compartment)
- Dairy Compartment
- Half-width Door Bin
- Full-width Door Bins
- Incandescent Light (freezer)
- Freezer Door Bin
- 2 Half-width Glass Shelves
- Deli Drawer
- 1 Full-width Glass Shelf
- Glass Shelf/Crisper Cover
- Crispers w/Humidity Controls
- Ice Bucket
- Wire Shelf
- Sliding Freezer Basket
- Toe Grille

**IMPORTANT**

Features not included with your refrigerator can be purchased at www.frigidaire.ca or by calling 1-800-265-8352.
*Features may vary according to model

**IMPORTANT**

Features not included with your refrigerator can be purchased at www.frigidaire.ca or by calling 1-800-265-8352.
Installation

- Allow the following clearances for ease of installation, proper air circulation, and plumbing and electrical connections:
  - Sides: 3/8 inch (9.5 mm)
  - Back & Top: 1 inch (25.4 mm)

NOTE
If your refrigerator is placed with the door hinge side against a wall, you may have to allow additional space so the door can be opened wider.

Door opening
Your refrigerator should be positioned to allow easy access to a counter when removing food. For best use of refrigerator drawers and freezer baskets, the refrigerator should be in a position where both can be fully opened.
Level Refrigerator & Adjust Doors (if necessary)

Guidelines for final positioning of your refrigerator:

- All four corners of the cabinet must rest firmly on the floor.
- The sides should tilt 1/4 inch (6 mm) from front to back (to ensure that doors close and seal properly).
- Doors should align with each other and be level.

Most of these conditions can be met by raising or lowering the adjustable front rollers.

The leveling legs have two purposes:

1. Leveling legs adjust so the refrigerator is firmly positioned on the floor and does not wobble.
2. Leveling legs serve as a stabilizing brake to hold the refrigerator securely in position during operation and cleaning. The leveling legs also prevent the refrigerator from tipping.

To level your refrigerator:

1. Remove the grille by removing the two Phillips head screws.
2. Turn the leveling legs clockwise to raise the refrigerator, counterclockwise to lower it.
3. Replace the base grille by inserting the two Phillips head screws.

CAUTION

To avoid possible personal injury or property damage, the leveling legs must be firmly touching the floor.

Set the Controls

Set the controls to the recommended setting.

Remove Packaging

1. Remove all tape, foam and protective packing from shelves and drawers.
2. Remove the tie downs from the freezer baskets.

Start Ice Maker (select models)

1. Place half width basket onto drawer slides.
2. Set the ice maker power switch to the 1 (on) position.

The ice maker will not begin to operate until it reaches its operating temperature of 15°F (-9°C) or below. It will then begin operation automatically. It will take two (2) to three (3) days to fill the ice bin.

NOTE

In lower water pressure conditions, the water valve may turn on up to three (3) times to deliver enough water to the ice maker.
Removing the Freezer Drawer
The freezer drawer can be removed, if needed, to fit through tight areas.
Read these instructions completely and carefully.

Remove the Basket
1. Open the freezer drawer until it stops.
2. The freezer basket rests on a frame inside the freezer drawer. Lift the basket up at the back.
3. Lift the front up and lift the entire basket up and out of the drawer.

Remove the Base Grille (if needed)
If, after removing the freezer drawer and refrigerator door, the refrigerator will still not fit through a doorway, the base grille can be removed.
Remove the base grille by removing the screws.

Replacing the Freezer Drawer

Attach and Secure the Drawer Front to the Slides
1. Pull out the rail assemblies to the full length on each side of the cabinet.
2. Locate the slots on the inside of the rail assemblies near the back.

Remove the Drawer Front From the Slides
1. Remove the screw on each side of the railing.
2. Lift up on both sides of the freezer drawer handle to separate the drawer railings from the rail assemblies.
3. Set the drawer front on a non-scratching surface.
4. Push the rail assemblies back into locking position.

Remove the Base Grille (if needed)
If, after removing the freezer drawer and refrigerator door, the refrigerator will still not fit through a doorway, the base grille can be removed.
Remove the base grille by removing the screws.

IMPORTANT
Two people may be required to complete this procedure.

Attach and Secure the Drawer Front to the Slides
1. Pull out the rail assemblies to the full length on each side of the cabinet.
2. Locate the slots on the inside of the rail assemblies near the back.
3. Insert the hooks at the back of the drawer railings into the slots on the rail assemblies.
4. Lower the front of the drawer making sure the tabs on the sides of the railings fit into the front slots in the rail assemblies.

5. Replace the screws on both rail assemblies.

Replace the Freezer Basket
Replace the lower freezer basket by lowering it into the frame.

Reversing the Door Swing (Single Door Refrigerator Models only)

- **NOTE**
  Door swing is not reversible on some stainless steel models.

- **IMPORTANT**
  Unplug the refrigerator from its electrical outlet.

- **IMPORTANT**
  Empty all door shelves, including the dairy compartment.

- **IMPORTANT**
  Once you begin, do not move the cabinet until door swing reversal is completed.

- **NOTE**
  When reversing the door swing:
  - Read the instructions all the way through before starting.
  - Parts are included in the door hinge kit.
  - Handle parts carefully to avoid scratching paint.
  - Set screws down by their related parts to avoid using them in the wrong places.
  - Provide a non-scratching work surface for the doors.

- **IMPORTANT**
  These instructions are for changing the hinges from the right side to the left side—if you ever want to change the hinges back to the right side, follow these same instructions and reverse all references to left and right.

- **IMPORTANT**
  Once door swing is finalized, ensure the logo badge is properly aligned and permanently secured to the door by removing the adhesive cover on the back side.

- **NOTE**
  A replacement logo badge is included in the hinge kit.
Remove the Refrigerator Door

1. Tape the door shut with masking tape.

2. Remove the hinge cover on top of the refrigerator door by carefully prying it up with a putty knife, if necessary.

3. Using a 5/16” socket ratchet/driver, remove the bolts securing the top hinge to the cabinet. Then lift the hinge straight up to free the hinge pin from the socket in the top of the door.

4. Carefully remove the door thimble from inside the socket. This will be used again when reinstalling the door on the other side.

5. Remove the tape and tilt the door away from the cabinet. Lift the door off the center hinge pin. Ensure that the plastic hinge pin thimble remains on the hinge pin or inside the door hinge pin hole located in the bottom of the door.

6. Set the door on a non-scratching surface with the inside up.

Remove the Center Hinge

1. Remove the hinge pin from the hinge bracket. The hinge pin will be used again with the new hinge bracket for the other side.

2. Using a 5/16” socket ratchet/driver, remove the bolts securing the center hinge to the cabinet. Set the bolts aside.

Install Center Hinge

1. Transfer the plug button and screw hole cover in the hinge holes on the left side to the right side.

2. A new hinge bracket is required for the left side (supplied in the door hinge kit). Install the center hinge from the kit on the left side.

3. Install the hinge pin into the new hinge bracket.
Transfer Refrigerator Door Stop

1. Remove the door stop on right side of the bottom of the refrigerator door by removing the two screws.
2. Move the plastic hinge hole thimble to the opposite hole.
3. Install the door stop on the left side, making sure to line up the screw holes in the door stop with the holes in the bottom of the door.

Transfer Refrigerator Door Handle to Right

Refer to "Remove the Fresh Food Door Handle" and "Attach the Fresh Food Door Handle" sections for instructions.

Rehang Refrigerator Door

1. Lower the refrigerator door onto the center hinge pin. Ensure that the plastic hinge pin thimble is on the center hinge pin or inside door hinge pin hole located in the bottom of the door.
2. Insert the door thimble into the hinge hole on top of the refrigerator door and then insert the top hinge pin. Make sure the door is aligned with the cabinet. Attach the hinge to the top of the cabinet loosely with the bolts.
3. Make sure the gasket on the door is flush against the cabinet and is not folded. Support the door on the handle side and make sure the door is straight and the gap between the doors is even across the front. While holding the door in place, tighten the top hinge bolts. Replace the hinge cover.

Install the Logo Badge

Remove the adhesive backing paper and align the badge over the holes in the door. Apply pressure to the badge to ensure it sticks to the door.
INSTALLING DOOR HANDLES

Door Handle Mounting Instructions for Frigidaire and Frigidaire Gallery®

1. Remove handles from carton and any other protective packaging.
2. Position fresh food handle end over upper and lower pre-installed shoulder bolts (A) that are fastened into door, ensuring the holes for the set screws are facing towards the nearest edge of door.
3. While holding handle firmly against door, fasten upper and lower Allen set screws (B) with supplied Allen wrench.
4. Position freezer handle end over left and right pre-installed handle mounts that are fastened to the door, ensuring the holes for the set screws are facing down.
5. While holding handle firmly against door, loosen and screw in far right Allen set screw (B) with supplied Allen wrench until there is no gap between handle and door.
6. Still holding the handle firmly to the door, firmly tighten far left Allen set screw (B) with supplied Allen wrench.
7. Return to the far right Allen set screw (B) and firmly tighten with supplied Allen wrench.

NOTE

All set screws should be tightened so the screw is below the surface of the handle. The handles should be drawn tight to freezer and refrigerator doors with no gaps. The door handle may loosen over time or if it was installed improperly. If this happens, tighten the set screws on the handles.

**CAUTION**

Wear gloves and safety goggles. Use extreme CAUTION when installing these handles since the edges can be very sharp.
Door Handle Mounting Instructions for Frigidaire Professional®

1. Remove handles from carton and any other protective packaging.
2. Position fresh food handle end over upper and lower pre-installed shoulder bolts (A) that are fastened into door, ensuring the holes for the set screws are facing towards the nearest edge of door.
3. While holding handle firmly against door, fasten upper and lower Allen set screws (B) with supplied Allen wrench.
4. Position freezer handle end over left and right pre-installed handle mounts that are fastened to the door, ensuring the holes for the set screws are facing down.
5. While holding handle firmly against door, loosely tighten far right Allen set screw (B) with supplied Allen wrench until there is no gap between handle and door.
6. Still holding the handle firmly to the door, firmly tighten far left Allen set screw (B) with supplied Allen wrench.
7. Return to the far right Allen set screw (B) and firmly tighten with supplied Allen wrench.

NOTE

All set screws should be tightened so the screw is below the surface of the handle. The handles should be drawn tight to freezer and refrigerator doors with no gaps. The door handle may loosen over time or if it was installed improperly. If this happens, tighten the set screws on the handles.

CAUTION

Wear gloves and safety goggles. Use extreme CAUTION when installing these handles.
WARNING

To avoid electric shock, which can cause death or severe personal injury, disconnect the refrigerator from electrical power before connecting a water supply line to the refrigerator.

CAUTION

To Avoid Property Damage:

- Copper or Stainless Steel braided tubing is recommended for the water supply line. Water supply tubing made of ¼ inch plastic is not recommended to be used. Plastic tubing greatly increases the potential for water leaks, and the manufacturer will not be responsible for any damage if plastic tubing is used for the supply line.
- DO NOT install water supply tubing in areas where temperatures fall below freezing.
- Chemicals from a malfunctioning softener can damage the ice maker. If the ice maker is connected to soft water, ensure that the softener is maintained and working properly.

IMPORTANT

Ensure that your water supply line connections comply with all local plumbing codes.

Before Installing The Water Supply Line, You Will Need:

- Basic Tools: adjustable wrench, flat-blade screwdriver, and Phillips™ screwdriver
- Access to a household cold water line with water pressure between 30 and 100 psi.
- A water supply line made of ¼ inch (6 mm) OD, copper or stainless steel tubing. To determine the length of tubing needed, measure the distance from the ice maker inlet valve at the back of the refrigerator to your cold water pipe. Then add approximately 7 feet (2.1 meters), so the refrigerator can be moved out for cleaning (as shown).
- A shut-off valve to connect the water supply line to your household water system. DO NOT use a self-piercing type shut-off valve.
- Do not reuse compression fitting or use thread seal tape.
- A compression nut and ferrule (sleeve) for connecting a copper water supply line to the ice maker inlet valve.

NOTE

Check with your local building authority for recommendations on water lines and associated materials prior to installing your new refrigerator. Depending on your local/state building codes, Frigidaire recommends for homes with existing valves its Smart Choice® water line kit 5305513409 (with a 6 ft. Stainless Steel Water Line) and for homes without an existing valve, Frigidaire recommends its Smart Choice water® line kit 5305510264 (with a 20 ft. Copper Water Line with self-tapping saddle valve). Please refer to www.frigidaire.com/store for more information.

To Connect Water Supply Line To Ice Maker Inlet Valve

1. Disconnect refrigerator from electric power source.
2. Place end of water supply line into sink or bucket. Turn ON water supply and flush supply line until water is clear. Turn OFF water supply at shutoff valve.
3. Remove plastic cap from water valve inlet and discard cap.
4. **If you use copper tubing** - Slide brass compression nut, then ferrule (sleeve) onto water supply line. Push water supply line into water valve inlet as far as it will go (¼ inch/6 mm). Slide ferrule (sleeve) into valve inlet and finger tighten compression nut onto valve. Tighten another half turn with a wrench; DO NOT overtighten. See Figure 1.
   - **If you use stainless steel tubing** - The nut and ferrule are already assembled on the tubing. Slide compression nut onto valve inlet and finger tighten compression nut onto valve. Tighten another half turn with a wrench; DO NOT overtighten. See Figure 2.
5. With steel clamp and screw, secure water supply line (copper tubing only) to rear panel of refrigerator as shown.
6. Coil excess water supply line (copper tubing only), about 2½ turns, behind refrigerator as shown and arrange coils so they do not vibrate or wear against any other surface.
7. Turn ON water supply at shutoff valve and tighten any connections that leak.
8. Reconnect refrigerator to electrical power source.
Control features

Your model will have one of the control panels shown below.

Frigidaire Professional Models

Frigidaire Baseline Models

Frigidaire Gallery Models

NOTE
The refrigerator is shipped with protective film covering the temperature controls. If this film was not removed during installation, remove it now.
**CONTROLS**

**For Professional Series Controls:**

The temperature controls are preset in the factory at 37°F for the refrigerator compartment and 0°F for the freezer compartment. Allow 24 hours for the temperature to stabilize to the preset recommended settings.

The temperature controls can display both the set temperature as well as the actual temperature in the refrigerator and freezer. The actual temperature may vary slightly from the set temperature based on usage and operating environment.

Setting either or both controls to “OFF” (O) stops cooling in both the freezer and refrigerator compartments but does not shut off electrical power to the refrigerator.

**Changing the temperature**

Opening the door displays the actual temperature. To change the temperature, press either the ∨ or ∧ touch pads until the desired temperature is displayed.

Once the desired temperature has been set, the temperature display will return to the actual refrigerator and freezer temperatures after five (5) seconds. Several adjustments may be required.

Each time you adjust controls, allow 24 hours for the refrigerator to reach the temperature you have set.

To turn the cooling system off, tap the ∨ pad for either the refrigerator or the freezer until the display shows OFF. To turn the unit back on, press the ∧ pad for either the refrigerator or freezer. Then press the ∧ pad again and it will go to the preset points of 0°F for the freezer and 37°F for the refrigerator. Setting either or both controls to OFF stops cooling in both the freezer and refrigerator compartments, but does not shut off electrical power to the refrigerator.

**How Quick Freeze Feature Works (select models)**

Quick freeze rapidly cools both compartments in order to more quickly cool foods. Use quick freeze when adding a large amount of food to the freezer or fresh food compartments, putting away foods after they have been sitting out at room temperature, or when putting away warm leftovers. It can also be used if the refrigerator has been without power for an extended period.

Once activated, the compressor will turn on immediately and the fans will cycle on and off at high speed as needed for eight hours. The compressor will continue to run until the refrigerator compartment cools to approximately 34°F (1°C) and the freezer cools to approximately 0°F (-18°C), then it will cycle on and off to maintain this setting. After eight (8) hours, or if quick freeze is pressed again, the freezer compartment will return to the original setting.

**About Door Alarm (select models)**

The door alarm will sound if any door is open for more than two (2) minutes. The beeping stops when you close the door.

**For Baseline Controls:**

On models utilizing temperature control knobs, initially set both knobs at 5. Allow 24 hours for temperatures to stabilize. If further adjustment is needed, adjust controls one increment at a time, and allow 24 hours to reach temperatures you have set. Several adjustments may be required. Setting the refrigerator temperature knob to “0” stops cooling in both the freezer and the refrigerator compartments, but does not shut off electrical power to the refrigerator.

**For Gallery Series Controls:**

Initially, set the refrigerator control at 5 and the freezer control at 5. This should result in temperatures of approximately 37°F and 0°F in the two respective compartments. Allow 24 hours for the temperatures to stabilize. Several adjustments may be required. Adjust the controls one increment at a time, and allow 24 hours after each adjustment for the refrigerator to reach the temperature you have set.

Setting either or both of the digital controls to “0” stops cooling in both the refrigerator and freezer compartments, but does not shut off electrical power to the refrigerator.
**Ice maker operation & care**

After the refrigerator is installed properly, the ice maker can produce ice within 24 hours. It can completely fill an ice bin in two (2) to three (3) days.

When using the ice maker for the first time and in order for the ice maker to work properly, it is necessary to clear air from water filter tubing. Once ice maker begins making ice, allow the bucket to fill completely, then discard the first TWO (2) FULL buckets of ice. It will take about two (2) days to completely fill the bucket on regular ice making mode.

The ice maker produces approximately 100 - 130 cubes or four (4) pounds of ice every 24 hours depending on usage conditions.

See below for how to turn the ice maker on and off.

**IMPORTANT**

Your ice maker is turned on at the factory so it can work as soon as you install your refrigerator. If you cannot connect a water supply right away, set the power switch on side of ice maker to the “OFF” (O) position. Otherwise, the ice maker’s fill valve may make a loud chattering noise when it attempts to operate without water.

When the refrigerator has been connected to the water supply, set the power switch to the “I” or ON position. The ice maker power light will turn green when the freezer light switch is pressed in or when the freezer door is closed.

The ice maker will fill with water when it cools to 15°F (-10°C). You will hear a buzzing sound each time the ice maker fills with water. A newly installed refrigerator may take 12 to 24 hours to begin making ice cubes.

Be sure nothing interferes with the sweep of the feeler arm. When the bin fills to the level of the feeler arm, the ice maker will stop producing ice. It is normal for several cubes to be joined together.

**Turning the ice maker on and off**

Ice production is controlled by the switch located on the side of the ice maker.

To gain access to the ice maker power switch, pull the shelf above the ice bin straight out. Always be sure to replace the shelf.

To access ice, simply pull the bin forward.

**NOTE**

In homes with lower-than-average water pressure, you may hear the ice maker cycle multiple times when making one batch of ice.
AUTOMATIC ICE MAKER (SELECT MODELS)

Ice maker tips

- If your refrigerator is not connected to a water supply or the water supply is turned off, turn off the ice maker by pressing the switch to “O” position.
- The following sounds are normal when the ice maker is operating:
  - Motor running
  - Ice dropping into ice bin
  - Water valve opening or closing
  - Running water
- Ice cubes stored too long may become cloudy or develop an odd flavor. Empty the ice bin as explained below.

Cleaning the ice maker

CAUTION

If the water supply to your refrigerator is softened, be sure the softener is properly maintained. Chemicals from a water softener can damage the ice maker.

Clean the ice maker and ice bin at regular intervals, especially prior to vacation or moving.

1. Turn off the ice maker.
2. Remove the ice bin.
3. Empty and carefully clean the ice bin with mild detergent. Do not use harsh or abrasive cleaners. Rinse with clean water.
4. Allow the ice bin to dry completely before replacing in the freezer.
5. Replace the ice bin. Turn the ice maker on.

Remove and empty the ice bin if:
- An extended power failure (one hour or longer) causes ice cubes in the ice bin to melt and freeze together.

Remove the ice bin and shake to loosen the cubes or clean as explained above.

CAUTION

NEVER use an ice pick or similar sharp instrument to break up the ice. This could damage the ice bin and dispenser mechanism.

To loosen stuck ice, use warm water. Before replacing the ice bin, make sure it is completely dry.

Ice maker accessory kit

If your refrigerator did not come already equipped with an automatic ice maker, an ice maker accessory kit is available at an extra cost. Check the back of the refrigerator for the specific ice maker kit needed for your model.
CAUTION

To avoid injury from breakage, handle tempered glass shelves carefully.

NOTE

Features may vary according to model.

Your refrigerator may include SpillSafe® glass shelves that are designed to catch and hold accidental spills. You can easily adjust shelf positions in the fresh food compartments to suit your needs. The shelves have mounting brackets that attach to slotted supports at the rear of each compartment.

To change the position of a shelf:
1. Remove all food from the shelf.
2. Lift the front edge up and pull the shelf out.
3. Replace by inserting the mounting bracket hooks into the desired support slots.
4. Lower the shelf and lock into position.

Crispers

Crisper drawers are designed for storing fruits, vegetables, and other fresh produce.

Opening Crisper Drawer

Crisper humidity control

Crisper drawers include a sliding control for adjusting the humidity inside the crisper. Leafy vegetables keep best when stored with the Humidity Control set on Higher Humidity. Fresh fruits keep best when stored with the Humidity Control set on Lower Humidity.

Adjusting Crisper Humidity

To remove the Crisper Drawer for cleaning:
1. Pull the drawer out until it stops.
2. Use both hands to lift the front slightly and remove the drawer.

Shelf features

Half SpillSafe® Shelf

Drawers

Your refrigerator includes a variety of storage drawers. These drawers are located in fixed positions at the bottom of the fresh food compartment.

Removing Crisper Drawer
**STORAGE FEATURES**

**Deli drawer**
Ideal for storage of deli meats and cheese.

---

**Doors**

**Storage bins**
The doors to your fresh food compartment use a system of modular storage bins. All of these bins are removable for easy cleaning. Some of them have fixed positions, while others can be adjusted to your needs.

Door bins are ideal for storing jars, bottles, cans, and large drink containers. They also enable quick selection of frequently used items.

**To change the position of an adjustable door bin:**
1. Remove all food from the door bin.
2. Grip the bin firmly with both hands and lift it upward.
3. Remove the bin.
4. Place the bin just above desired position.
5. Lower the bin onto supports until locked in place.

---

**Accessories (varies by model)**

**Dairy compartment**
Use the dairy compartment, at the top of the fresh food compartment door, for short-term storage of cheese, spreads, or butter. The dairy compartment is designed to be warmer than the open area and includes a lift-up cover and a dairy divider (select models).

---

**Freezer Features (varies by model)**

---
To Remove Upper Basket

1. Remove all items from basket.
2. Remove basket by pulling baskets out to their full extension and lift out.

To reinstall upper basket, position basket onto the retainer clips making sure the front of the basket rests in the retainer clips on the stabilizer bar.

NOTE
If basket is not resting on stabilizer bar retainer clips, the drawer will not close properly.

To Remove Lower Basket

1. Remove all items from basket.
2. Remove the basket by tilting it forward and lifting it from the retainer clips.

To reinstall lower basket, insert basket into retainer clips.
Ideas for storing foods

**Fresh food storage**
- Keep the fresh food compartment between 34°F and 40°F with an optimum temperature of 37°F.
- Avoid overcrowding the refrigerator shelves, which reduces air circulation and causes uneven cooling.

**Fruits and vegetables**
- Store fruits and vegetables in crisper drawers, where trapped moisture helps preserve food quality for longer time periods.
- Wash items and remove excess water.
- Wrap any items that have strong odors or high moisture content.

**Meat**
- Wrap raw meat and poultry separately and securely to prevent leaks and contamination of other foods or surfaces.
- Use the deli drawer to store meat/poultry for short-term storage. Any meat to be kept longer than two (2) days should be frozen.

**Frozen food storage**
- Keep the freezer compartment at 0°F or lower.
- A freezer operates most efficiently when it is at least 2/3 full.

**Packaging foods for freezing**
- To minimize food dehydration and quality deterioration, use aluminum foil, freezer wrap, freezer bags, or airtight containers. Force as much air out of the packages as possible and seal them tightly. Trapped air can cause food to dry out, change color, and develop an off-flavor (freezer burn).
- Wrap fresh meats and poultry with suitable freezer wrap prior to freezing.
- Do not refreeze meat that has completely thawed.

**Loading the freezer**
- Prior to grocery shopping, activate “quick freeze” so that on your return you can ensure your newly purchased food designated for the freezer will be preserved as quickly as possible.
- Activating “quick freeze” also will help your freezer more efficiently maintain the selected temperature after placing new purchases with pre-existing frozen foods.

- Avoid adding too much warm food to the freezer at one time. This overloads the freezer, slows the rate of freezing, and can raise the temperature of frozen foods.
- Leave a space between packages, so cold air can circulate freely, allowing food to freeze as quickly as possible.

Ideas for saving energy

**Installation**
- Locate the refrigerator in the coolest part of the room, out of direct sunlight, and away from heating ducts or registers.
- Do not place the refrigerator next to heat-producing appliances such as a range, oven, or dishwasher. If this is not possible, a section of cabinetry or an added layer of insulation between the two (2) appliances will help the refrigerator operate more efficiently.
- Level the refrigerator so that the doors close tightly.

**Temperature settings**
- Refer to the “Controls” section for procedures on temperature settings.

**Food storage**
- Avoid overcrowding the refrigerator or blocking cold air vents. Doing so causes the refrigerator to run longer and use more energy.
- Cover foods and wipe containers dry before placing them in the refrigerator. This cuts down on moisture build-up inside the unit.
- Organize the refrigerator to reduce door openings. Remove as many items as needed at one time and close the door as soon as possible.
- Do not place a hot container directly on a cold shelf. Remember, such an extreme temperature change may damage the glass.
Understanding the sounds you may hear

Your new, high-efficiency refrigerator may introduce unfamiliar sounds. These sounds normally indicate your refrigerator is operating correctly. Some surfaces on floors, walls, and kitchen cabinets may make these sounds more noticeable.

The following is a list of major components in your refrigerator and the sounds they can cause:

A **Evaporator** Refrigerant through the evaporator may create a boiling or gurgling sound.

B **Evaporator fan** You may hear air being forced through the refrigerator by the evaporator fan.

C **Defrost heater** During defrost cycles, water dripping onto the defrost heater may cause a hissing or sizzling sound. After defrosting, a popping sound may occur.

D **Automatic ice maker** When ice has been produced, you will hear ice cubes falling into the ice bin. Ice maker fan, water valve activation, and refrigerant gas fluid may create sounds from its operation.

E **Electronic control & automatic defrost control** These parts can produce a snapping or clicking sound when turning the cooling system on and off.

F **Condenser fan** You may hear air being forced through the condenser.

G **Compressor** Modern, high-efficiency compressors run much faster than older models. The compressor may have a high-pitched hum or pulsating sound.

H **Water valve** Makes a buzzing sound each time it opens to fill the ice maker.

I **Drain pan** (not removable) You may hear water dripping into the drain pan during the defrost cycle.

J **Condenser** May create minimal sounds from forced air.

M **Motorized damper** May produce a light humming during operation.

---

**NOTE**

Energy efficient foam in your refrigerator is not a sound insulator.

**NOTE**

During automatic defrost cycle, a red glow in the back wall vents of your freezer compartment is normal.
CHANGING THE FILTER

Air filter (select models)
The air filter is located under the utility bin.

Replacing your PureAdvantage™ air filter
To ensure optimal filtering of refrigerator odors, you should change the air filter every six (6) months.

1. Slide out the tray located below the dairy bin.
2. Remove the old filter and discard it.
3. Unpack the new filter and place it in the housing.
4. Slide tray with filter back into the opening.

Ordering replacement filters
Order new filters by calling 1-800-265-8352, online at www.frigidairecanadastore.com, or through the dealer where you bought your refrigerator. You may want to consider ordering extra filters when you first install your refrigerator.

Air Filter Replacement cartridge, part #PAULTRA
Protecting your investment
Keeping your refrigerator clean maintains its appearance and prevents odor build-up. Wipe up any spills immediately and clean the freezer and fresh food compartments at least twice a year.

NOTE
Do not use abrasive cleaners such as window sprays, scouring cleansers, flammable fluids, cleaning waxes, concentrated detergents, bleaches, or cleansers containing petroleum products on plastic parts, interior doors, gaskets, or cabinet liners. Do not use paper towels, scouring pads, or other abrasive cleaning materials.

- Never use metallic scouring pads, brushes, abrasive cleaners, or strong alkaline solutions on any surface.
- Never use CHLORIDE or cleaners with bleach to clean stainless steel.
- Do not wash any removable parts in a dishwasher.
- Always unplug the electrical power cord from the wall outlet before cleaning.

NOTE
If you set your temperature controls to turn off cooling, power to lights and other electrical components will continue until you unplug the power cord from the wall outlet.

- Remove adhesive labels by hand. Do not use razor blades or other sharp instruments which can scratch the appliance surface.
- Do not remove the serial plate. Removal of your serial plate voids your warranty.
- Before moving your refrigerator, raise the anti-tip brackets so the rollers will work correctly. This will prevent the floor from being damaged.

CAUTION
- Pull the refrigerator straight out to move it. Shifting it from side to side may damage flooring. Be careful not to move the refrigerator beyond the plumbing connections.
- Damp objects stick to cold metal surfaces. Do not touch refrigerated surfaces with wet or damp hands.

IMPORTANT
If you store or move your refrigerator in freezing temperatures, be sure to completely drain the water supply system. Failure to do so could result in water leaks when the refrigerator is put back into service. Contact a service representative to perform this operation.

Refer to the guide on the next page for details on caring and cleaning specific areas of your refrigerator.

<tbody>
<tr>
<td>Interior &amp; Door Liners</td>
<td>• Soap and water</td>
<td>• Use two (2) tablespoons of baking soda in one (1) quart of warm water.</td>
</tr>
<tr>
<td></td>
<td>• Baking soda and water</td>
<td>• Be sure to wring excess water out of sponge or cloth before cleaning around controls, light bulb or any electrical part.</td>
</tr>
<tr>
<td>Door Gaskets</td>
<td>• Soap and water</td>
<td>• Wipe gaskets with a clean soft cloth.</td>
</tr>
<tr>
<td>Drawers &amp; Bins</td>
<td>• Soap and water</td>
<td>• Use a soft cloth to clean drawer runners and tracks.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Do not wash any removable items (bins, drawers, etc.) in dishwasher.</td>
</tr>
<tr>
<td>Glass Shelves</td>
<td>• Soap and water</td>
<td>• Allow glass to warm to room temperature before immersing in warm water.</td>
</tr>
<tr>
<td></td>
<td>• Glass cleaner</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Mild liquid sprays</td>
<td></td>
</tr>
<tr>
<td>Toe Grille</td>
<td>• Soap and water</td>
<td>• Remove toe grille (see Installation Instructions).</td>
</tr>
<tr>
<td></td>
<td>• Mild liquid sprays</td>
<td>• Vacuum both sides and wipe with sudsy cloth or sponge. Rinse and dry.</td>
</tr>
<tr>
<td></td>
<td>• Vacuum</td>
<td></td>
</tr>
<tr>
<td>Exterior &amp; Handles</td>
<td>• Soap and water</td>
<td>• Do not use commercial household cleaners containing ammonia, bleach or alcohol to clean handles.</td>
</tr>
<tr>
<td></td>
<td>• Non abrasive glass cleaner</td>
<td>• Use a soft cloth to clean smooth handles.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Do not use a dry cloth to clean smooth doors.</td>
</tr>
<tr>
<td>Exterior &amp; Handles</td>
<td>• Soap and water</td>
<td>• Never use CHLORIDE or cleaners with bleach to clean stainless steel.</td>
</tr>
<tr>
<td>(Stainless Steel Models Only)</td>
<td>• Stainless steel cleaners</td>
<td>• Clean stainless steel front and handles with non-abrasive soapy water and a dishcloth. Rinse with clean water and a soft cloth.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Use a non-abrasive stainless steel cleaner. These cleaners can be purchased at most home improvement or major department stores. Always follow manufacturer's instruction. Do not use household cleaners containing ammonia or bleach.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NOTE: Always clean, wipe and dry with grain to prevent scratching.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Wash the rest of the cabinet with warm water and mild liquid detergent. Rinse well and wipe dry with a clean soft cloth.</td>

## Vacation and moving tips

<table>
<thead>
<tr>
<th>Occasion</th>
<th>Tips</th>
</tr>
</thead>
<tbody>
<tr>
<td>Short Vacations</td>
<td>• Leave refrigerator operating during vacations of three (3) weeks or less.</td>
</tr>
<tr>
<td></td>
<td>• Use all perishable items from refrigerator compartment.</td>
</tr>
<tr>
<td></td>
<td>• Turn automatic ice maker off and empty ice bucket, even if you will only be gone a few days.</td>
</tr>
<tr>
<td>Long Vacations</td>
<td>• Remove all food and ice if you will be gone one (1) month or more.</td>
</tr>
<tr>
<td></td>
<td>• Turn the cooling system off (see “Controls” section for location of On/Off button) and disconnect power cord.</td>
</tr>
<tr>
<td></td>
<td>• Turn water supply valve to closed position.</td>
</tr>
<tr>
<td></td>
<td>• Clean interior thoroughly.</td>
</tr>
<tr>
<td></td>
<td>• Leave both doors open to prevent odors and mold build-up. Block doors open if necessary.</td>
</tr>
<tr>
<td>Moving</td>
<td>• Remove all food and ice.</td>
</tr>
<tr>
<td></td>
<td>• If using a handcart, load from the side.</td>
</tr>
<tr>
<td></td>
<td>• Adjust rollers all the way up to protect them during sliding or moving.</td>
</tr>
<tr>
<td></td>
<td>• Pad cabinet to avoid scratching surface.</td>
</tr>
</tbody>

Replacing Light Bulbs
Both the freezer and fresh food compartments of your refrigerator include incandescent light bulbs that will need replacing from time-to-time. Some lights have covers that need to be removed before replacing the bulbs. Always use bulbs that are designed for appliance lighting.

**CAUTION**
Wear gloves when replacing incandescent light bulbs to avoid getting cut. Light bulbs may be hot.

**To replace refrigerator lights (located behind control panel):**
1. Unplug your refrigerator’s power cord.
2. Wear protective gloves.
3. To remove light cover, grasp the cover at the back and pull out to release the tabs at the back.
4. Rotate the cover down and then forward to release the tabs at the front of the cover.
5. Replace old bulb with an appliance bulb of the same type and wattage (normally 40 watts).
6. Replace light cover.
7. Plug in the refrigerator’s power cord.

**To replace freezer lights (located at top rear corner of freezer):**
1. Unplug your refrigerator’s power cord.
2. Wear protective gloves.
3. To remove light cover, grasp the cover at the back and pull out to release the tabs at the back.
4. Rotate the cover down and then forward to release the tabs at the front of the cover.
5. Replace old bulb with an appliance bulb of the same type and wattage (normally 40 watts).
6. Replace light cover.
7. Plug in the refrigerator’s power cord.

**To replace middle lights (located behind crisper drawers) (select models):**
1. Unplug your refrigerator’s power cord.
2. Wear protective gloves.
3. The bulbs are located behind the crisper drawers. To remove the drawers, lift up slightly while pulling the drawer past the stop location.
4. Replace old bulb with an appliance bulb of the same type and wattage (normally 40 watts).
5. Replace crisper drawers by sliding them gently back onto the tracks while lifting up slightly.
6. Plug in the refrigerator’s power cord.

**Ordering Replacement Lights**
Order new lights by calling 1-800-265-8352, online at www.frigidairecanadastore.com, or through the dealer where you bought the refrigerator. Here is the product number to request when ordering:

**Incandescent Lights (40-watt bulb),**

<thead>
<tr>
<th>CONCERN</th>
<th>POTENTIAL CAUSE</th>
<th>COMMON SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>AUTOMATIC ICE MAKER</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| Ice maker is not making any ice. | - Ice maker power switch is Off.  
- Ice maker has small cube caught in mechanism.  
- Saddle valve on cold water pipe is clogged or restricted by foreign material. | - Turn power switch to On ("I") position.  
- Remove small cube from ice maker. The ice and water filter cartridge may be clogged. Replace filter cartridge.  
- Turn off household water line valve. Remove valve. Ensure that valve is not a self-piercing saddle valve. Clean valve. Replace valve if necessary. |
| Ice maker is not making enough ice. | - Ice maker is producing less ice than you expect.  
- Check to see if water dispenser is dispensing slower than normal. | - The ice maker produces approximately four (4) pounds of ice every 24 hours depending on usage conditions.  
- If it is, replace the ice and water filter cartridge. |
| Ice maker will not stop making ice. | - Ice maker wire signal arm is being held down by some item in the freezer. | - Move item and release wire signal arm. Remove any ice cubes that are frozen together over the wire signal arm. |
| Ice cubes are freezing together. | - Ice cubes are not being used frequently enough.  
- Ice cubes are hollow (partially frozen cubes with water inside).  
- Freezer control is set too warm. | - Remove ice container and discard ice from container. Ice maker will produce fresh supply.  
- The ice and water filter cartridge may be clogged. Replace filter cartridge.  
- Set freezer control to colder setting. Allow 24 hours for temperature to stabilize. |
| **OPENING/CLOSING OF DOORS/DRAWERS** |
| Door(s) will not close. | - Door was closed too hard, causing other door to open slightly.  
- Refrigerator is not level. It rocks on the floor when moved slightly.  
- Refrigerator is touching a wall or cabinet. | - Close both doors gently.  
- Ensure floor is level and solid, and can adequately support the refrigerator. Contact a carpenter to correct a sagging or sloping floor.  
- Ensure floor is level and solid, and can adequately support the refrigerator. Contact a carpenter to correct a sagging or sloping floor. |
| Drawers are difficult to move. | - Food is touching shelf on top of drawer.  
- Track that drawers slide on is dirty. | - Remove top layer of items in drawer.  
- Ensure drawer is properly installed on track.  
- Clean drawer, rollers, and track. See Care & Cleaning. |

MAJOR APPLIANCE WARRANTY

Your appliance is covered by a one year limited warranty. For one year from your original date of purchase, Electrolux will pay all costs for repairing or replacing any parts of this appliance that prove to be defective in materials or workmanship when such appliance is installed, used and maintained in accordance with the provided instructions.

Exclusions

This warranty does not cover the following:

1. Products with original serial numbers that have been removed, altered or cannot be readily determined.
2. Product that has been transferred from its original owner to another party or removed outside the USA or Canada.
3. Rust on the interior or exterior of the unit.
4. Products purchased “as-is” are not covered by this warranty.
5. Food loss due to any refrigerator or freezer failures.
6. Products used in a commercial setting.
7. Service calls which do not involve malfunction or defects in materials or workmanship, or for appliances not in ordinary household use or used other than in accordance with the provided instructions.
8. Service calls to correct the installation of your appliance or to instruct you how to use your appliance.
9. Expenses for making the appliance accessible for servicing, such as removal of trim, cupboards, shelves, etc., which are not a part of the appliance when it is shipped from the factory.
10. Service calls to repair or replace appliance light bulbs, air filters, water filters, other consumables, or knobs, handles, or other cosmetic parts.
11. Surcharges including, but not limited to, any after hour, weekend, or holiday service calls, tolls, ferry trip charges, or mileage expense for service calls to remote areas, including the state of Alaska.
12. Damages to the finish of appliance or home incurred during installation, including but not limited to floors, cabinets, walls, etc.
13. Damages caused by: services performed by unauthorized service companies; use of parts other than genuine Electrolux parts or parts obtained from persons other than authorized service companies; or external causes such as abuse, misuse, inadequate power supply, accidents, fires, or acts of God.

DISCLAIMER OF IMPLIED WARRANTIES; LIMITATION OF REMEDIES

CUSTOMER’S SOLE AND EXCLUSIVE REMEDY UNDER THIS LIMITED WARRANTY SHALL BE PRODUCT REPAIR OR REPLACEMENT AS PROVIDED HEREIN. CLAIMS BASED ON IMPLIED WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO ONE YEAR OR THE SHORTEST PERIOD ALLOWED BY LAW, BUT NOT LESS THAN ONE YEAR. ELECTROLUX SHALL NOT BE LIABLE FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES SUCH AS PROPERTY DAMAGE AND INCIDENTAL EXPENSES RESULTING FROM ANY BREACH OF THIS WRITTEN LIMITED WARRANTY OR ANY IMPLIED WARRANTY. SOME STATES AND PROVINCES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, OR LIMITATIONS ON THE DURATION OF IMPLIED WARRANTIES, SO THESE LIMITATIONS OR EXCLUSIONS MAY NOT APPLY TO YOU. THIS WRITTEN WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS. YOU MAY ALSO HAVE OTHER RIGHTS THAT VARY FROM STATE TO STATE.

If You Need Service

Keep your receipt, delivery slip, or some other appropriate payment record to establish the warranty period should service be required. If service is performed, it is in your best interest to obtain and keep all receipts. Service under this warranty must be obtained by contacting Electrolux at the addresses or phone numbers below.

This warranty only applies in the USA and Canada. In the USA, your appliance is warranted by Electrolux Major Appliances North America, a division of Electrolux Home Products, Inc. In Canada, your appliance is warranted by Electrolux Canada Corp. Electrolux authorizes no person to change or add to any obligations under this warranty. Obligations for service and parts under this warranty must be performed by Electrolux or an authorized service company. Product features or specifications as described or illustrated are subject to change without notice.
