Installation Instructions* for French Door Bottom Freezer/Refrigerator

*Please refer to your Use & Care Guide for more details.

1. Preparing For Installation

Be sure to coordinate site preparation and installation with your kitchen contractor.

Include these minimum guidelines in your site preparation:
- Choose a place near a grounded electrical outlet.
- Do not use an extension cord or an adapter plug.
- Avoid direct sunlight and close proximity to a range, dishwasher or other heat source.
- Sufficient air circulation is essential for proper operation.
- Floor should be level and able to support a fully open
- Avoid direct sunlight and close proximity to a range, dishwasher or other heat source.

2. Connect Water Supply

Before installing The Water Supply Line, You Will Need:
- Basic Tools: adjustable wrench, flat-blade screwdriver, and Phillips® screwdriver.
- Access to a household cold water line with water pressure between 30 and 100 psi.
- A water supply the make of ¾ inch (6 mm) OD, copper tubing is the water supply tubing needed. Measure the distance from the ice maker inlet valve to your cold water pipe. Then add approximately 7 feet, so the ice maker can be filled with water.
- A stainless water supply line to your household water system. DO NOT use a self-piercing type valve.
- A compression nut and ferrule (sleeve) for connecting a copper water supply line to the ice maker inlet valve.

To avoid electric shock, which can lead to severe personal injury, disconnect the power to your refrigerator’s compressor.

CAUTION

To Avoid Property Damage:
Copper or Stainless Steel braided tubing is recommended for the water supply line. Water supply tubing made of ½ inch (6 mm) plastic is not recommended to be used. Plastic tubing greatly increases the potential for water leaks, and the manufacturer will not be responsible for any damage if plastic tubing is used for the supply line. Avoid direct sunlight and close proximity to a range, dishwasher or other heat source.

3. Level Refrigerator

Guidelines for final positioning of your refrigerator:
- All four corners of the cabinet rest evenly on the floor.
- The sides should lift ¾ inch (6 mm) from front to back (to ensure that doors close and seal properly).
- Doors should align with each other and be level.

Most of these conditions can be met by raising or lowering the adjustable front rollers.

To level the cabinet using the front rollers:
1. You can raise or lower each door. Use a ¼ inch socket wrench to turn the adjustment screw (located on the side).
2. To raise: turn adjustment screw clockwise.
3. To lower: turn adjustment screw counterclockwise.
4. Ensure both doors are bound-less with their seals touching the cabinet on all four sides and that cabinet is stable.
5. After unit is leveled, lower anti-tip leg until it contacts the floor.

To Connect Water Supply Line To Ice Maker Inlet Valve

1. Disconnect refrigerator from electric power source.
2. Place end of water supply line into sink or bucket. Turn ON water supply line and flush supply line until water is clear. Turn OFF water supply at shutoff valve.
3. Remove plastic cap from water valve inlet and discard cap.
4. If you use copper tubing - Slide brass nut, then ferrule (sleeve) onto water supply line. Push water supply line into valve water valve inlet as far as it will go (¼ inch). Slide ferrule (sleeve) into valve inlet and finger tightener onto nut valve. Tighten another half turn with a wrench; DO NOT overtighten. See Figure 1.
5. If you use braided, flexible stainless steel tubing - The nut is already assembled on the tubing. Slide nut onto valve inlet and finger tighten onto valve. Tighten another half turn with a wrench; DO NOT overtighten. See Figure 2.
6. With steel clamp and screws, secure water supply line (copper tubing only) to rear panel of refrigerator as shown.
7. Coil excess water supply line (copper tubing only). About 3½ turns, behind refrigerator as shown and arrange coils so they do not vibrate or wear against any other surface.
8. Reconnect refrigerator to electric power source.
9. To turn ice maker on, lower wire signal arm (freezer ice maker) or set the ice maker’s On/Off power switch to the “ON” position (fresh food ice maker).

To make final door height adjustments:
1. Open freezer drawer to make lower hinge visible.
2. Shorten 6 mm Allen wrench into the shaft of the lower hinge.
3. Adjust the height by turning clockwise or counterclockwise to lower or raise the door. Turning clockwise will raise the ice maker plow setting to the lowest height when you receive your appliance.

4. Removing & Replacing Freezer Drawer

Removing Freezer Drawer
1. Remove 4 hex head drawer screws.
2. Lift up drawer to remove.

Replacing Freezer Drawer
1. Lower drawer back into place.
2. Replace 4 hex head drawer screws and tighten.

5. Adjusting Doors (if necessary)

6. Remove Internal Shipping Materials

Frigidaire uses packing foam and tape to secure the internal parts of your refrigerator for shipping. Once the refrigerator is in position, you can remove this material.

What’s Next?
Congratulations! You are ready to begin enjoying your new Frigidaire refrigerator.
- For important safety instructions and to learn how to operate your refrigerator, please read the owner’s manual.
- You may want to start with the “Normal Operating Sights & Sounds” section of the Guide to learn what to expect during typical operation.
- Please register your product. You can register online at www.frigidaire.com or you can simply via in the Registration Card.

7. Installation Check List

Doors
- Handles are secure and tight
- Door seals completely to cabinet on all sides
- Fresh food doors are level

Leveling:
- Refrigerator is level, side to side and tilted up ¾ inch (6 mm) front to back
- The grille is properly attached to refrigerator
- Cabinet is sitting solid on all corners

Ice Maker
- House water supply connected to refrigerator
- No leaks present at all connections
- Ice Maker is turned ON

Final Checks
- Shipping material removed
- Fresh Food and Freezer temperatures set

If you are not satisfied with the installation of your refrigerator, please contact the store where you purchased it or call 1-800-944-9044 for assistance.
