Dishwasher
Installation Instructions

Installation Preparation

1. If an E. coli test is not available, the water source being used must be disinfected.
2. If a water heater is not available, a water pressure of at least 20 psi is required.
3. If there is no available water supply, water must be supplied by a water pump.
4. If the water supply is under 20 psi, a water pressure booster must be installed.
5. If there is no available power supply, a power supply must be provided.
