Tip Over Hazard

- A child or adult can tip the oven and be killed.
- Install the anti-tip device to oven and/or structure per installation instructions.
- Ensure the anti-tip device is re-engaged when the oven is moved.
- Do not operate the oven without the anti-tip device in place and engaged.
- Failure to follow these instructions can result in death or serious burns to children and adults.

Refer to the installation instructions supplied with your appliance for proper installation.

Check for proper installation with a visual check that the anti-tip screws are present. Test the installation with light downward pressure on the open oven door. The oven should not tip forward.
IMPORTANT SAFETY INSTRUCTIONS

IMPORTANT INSTRUCTIONS FOR UNPACKING AND INSTALLATION

Read and follow the below instructions and precautions for unpacking, installing, and servicing your appliance:

Remove all tape and packaging before using the appliance. Destroy the carton and plastic bags after unpacking the appliance. Never allow children to play with packaging material. Do not remove the wiring label and other literature attached to the range. Do not remove model/serial number plate.

Cold temperatures can damage the electronic control. When using this appliance for the first time, or when the appliance has not been used for an extended period of time, be sure the appliance has been in temperatures above 32°F (0°C) for at least 3 hours before turning on the power to the appliance.

Never modify or alter the construction of the appliance by removing the leveling legs, panels, wire covers, anti-tip brackets/screws, or any other part of the appliance.

Be sure to have an appropriate foam-type fire extinguisher available, visible, and easily accessible located near the appliance.

GROUNDING INSTRUCTIONS

Avoid fire hazard or electrical shock. Failure to follow this warning may cause serious injury, fire, or death.

Avoid fire hazard or electrical shock. Do not use an adapter plug, use an extension cord, or remove grounding prong from the power cord. Failure to follow this warning may cause serious injury, fire, or death.
**IMPORTANT SAFETY INSTRUCTIONS**

**IMPORTANT INSTRUCTIONS FOR USING THE APPLIANCE**

**WARNING**

Storage In or On Appliance—Flammable materials should not be stored in an oven, near surface burners, or in the warmer drawer (if equipped). This includes paper, plastic, and cloth items, such as cookbooks, plastic ware, and towels, as well as flammable liquids. Do not store explosives, such as aerosol cans, on or near the range.

Do not leave children alone - Children should not be left alone or unattended in the area where the appliance is in use. They should never be allowed to sit or stand on any part of the appliance, including the storage drawer, lower broiler drawer, or lower double oven.

Do not store items of interest to children in the cabinets above the range. Children climbing on the range to reach items could be seriously injured.

Do not allow children to climb or play around the appliance. The weight of a child on an open oven door may cause the appliance to tip, resulting in serious burns or other injury. An open drawer when hot may cause burns.

Do not store items of interest to children in the cabinets above the range. Children climbing on the range to reach items could be seriously injured.

Stepping, leaning, or sitting on the door or drawers of this appliance can result in serious injuries and also cause damage to the appliance.

**WARNING**

Never cover any slots, holes, or passages in the oven bottom or cover an entire oven rack with materials such as aluminum foil or aftermarket oven liners. Doing so blocks air flow through the oven and may result in carbon monoxide poisoning. Aluminum foil linings may trap heat, causing a fire hazard.

Do not use oven or warmer drawer (if equipped) for storage.

Never use your appliance as a space heater to heat or warm the room. Doing so may result in carbon monoxide poisoning and overheating of the appliance.

**CAUTION**

When heating fat or grease, watch it closely. Grease may catch fire if it becomes too hot.

Do not use water or flour on grease fires. Smother fire or flame or use dry chemical or foam-type extinguisher. Cover the fire with a pan lid or use baking soda.

Use dry potholders. Moist or damp potholders on hot surfaces may result in serious burns or other injury. An open drawer when hot may cause burns.

Do not store items of interest to children in the cabinets above the range. Children climbing on the range to reach items could be seriously injured.

Do not heat unopened food containers - Build-up of pressure may cause container to burst and result in injury.

Wear proper apparel - Loose-fitting or hanging garments should never be worn while using the appliance. Do not let clothing or other flammable materials contact hot surfaces.
**IMPORTANT SAFETY INSTRUCTIONS**

**CAUTION**

Do not touch surface burners or elements, areas near these burners or elements, interior surfaces of the oven, or the warmer drawer (if equipped). Surface burners and elements may be hot even though they appear cool. Areas near surface burners and elements may become hot enough to cause burns. During and after use, do not touch, or let clothing or other flammable materials touch these areas until they are cool. These areas may include the cooktop, surfaces facing the cooktop, oven vent areas, oven door, and oven window.

Do not attempt to operate the appliance during a power failure. If the power fails, always turn off the appliance. If the appliance is not turned off and the power resumes, electric surface elements may resume operation when power is restored. Once the power resumes, reset the clock and the oven function.

Keep oven vent ducts unobstructed. Touching surfaces in this area when the oven is on may cause severe burns. Do not place plastic or heat-sensitive items on or near the oven vent. These items can melt or ignite.

Placement of oven racks - Always place oven racks in desired location while oven is cool. If rack must be moved while oven is hot, do not let potholder contact hot burner or element in oven. Use potholders and grasp the rack with both hands to reposition. Remove all cookware and utensils before moving the rack.

Do not use a broiler pan without its insert. Broiler pans and inserts allow dripping fat to drain away from the high heat of the broiler. Do not cover the broiler insert with aluminum foil; exposed fat and grease could ignite.

Do not cook food on the oven bottom. Always cook in proper cookware and always use the oven racks.

**IMPORTANT INSTRUCTIONS FOR CLEANING YOUR APPLIANCE**

**CAUTION**

Before manually cleaning any part of the appliance, be sure all controls are turned off and the range is cool. Cleaning a hot oven can cause burns.

Clean the appliance regularly to keep all parts free of grease that could catch fire. Do not allow grease to accumulate. Greasy deposits in the fan could catch fire.

Always follow the manufacturer’s recommended directions for use of kitchen cleaners and aerosols. Be aware that excess residue from cleaners and aerosols may ignite causing damage and injury.

**IMPORTANT INSTRUCTIONS FOR USING YOUR OVEN**

Protective liners—Do not use aluminum foil, after-market oven liners, or any other materials or devices to line oven bottom, oven racks, or any other part of the appliance. Only use aluminum as recommended for baking, such as lining cookware or as a cover placed on food. Any other use of protective liners or aluminum foil may result in a risk of electric shock or fire or a short circuit.

Use care when opening oven door, lower oven door, or warmer drawer (some models). Stand to the side of the appliance when opening the door of a hot oven. Let hot air or steam escape before you remove or replace food in the oven.
IMPORTANT SAFETY INSTRUCTIONS

IMPORTANT INSTRUCTIONS FOR SELF CLEANING OVENS

Do not clean the oven door gasket. The door gasket is essential for a good seal. Care should be taken not to rub, damage, or move the gasket.

Do not use oven cleaners. No commercial oven cleaner or oven liner protective coating of any kind should be used in or around any part of the appliance.

Use the self clean cycle to clean only the parts listed in this manual.

Before using self clean, remove the broiler pan, any food, utensils, and cookware from the oven, storage drawer or warming drawer (if equipped). Remove oven racks unless otherwise instructed.

Some birds are extremely sensitive to the fumes given off during the self clean cycle of any oven. Move birds to another well-ventilated room.

IMPORTANT INSTRUCTIONS FOR SERVICE AND MAINTENANCE

Do not repair or replace any part of the appliance unless specifically recommended in the manuals. All other servicing should be done only by a qualified technician. This reduces the risk of personal injury and damage to the appliance.

Always contact your dealer, distributor, service agent, or manufacturer about problems or conditions you do not understand.

Ask your dealer to recommend a qualified technician and an authorized repair service. Know how to disconnect the power to the appliance at the circuit breaker or fuse box in case of an emergency.

Remove the oven door from any unused oven if it is to be stored or discarded.

Do not touch a hot oven light bulb with a damp cloth. Doing so could cause the bulb to break. Handle halogen lights (if equipped) with paper towels or soft gloves. Disconnect the appliance or shut off the power to the appliance before removing and replacing the bulb.

Important Safety Notice - The California Safe Drinking Water and Toxic Enforcement Act requires the governor of California to publish a list of substances known to cause cancer, birth defects, or other reproductive harms, and requires businesses to warn customers of potential exposures to such substances.
BEFORE SETTING OVEN CONTROLS

Oven Vent Location

The oven is vented as shown below. When the oven is on, warm air is released through the vent. This venting is necessary for proper air circulation in the oven and good baking results. Do not block oven vent. Never close off the openings with aluminium foil or any other material. Steam or moisture may appear near the oven vent. This is normal.

Types of oven racks

- **Flat oven racks** (or the flat handle oven rack) may be used for most cooking needs and may be placed in most oven rack positions.
- **The offset oven rack** (some models) provides additional step down positions from the standard flat rack design. The offset design positions the base of the rack about ½ of a rack position lower than the flat rack and may be used in most oven rack positions.
- **The fully extendable oven glide rack** allows you to effortlessly extend your food away from the oven.

Removing, replacing, and arranging flat or offset oven racks

**To arrange** - Always arrange the oven racks when the oven is cool (prior to operating the oven).

**To remove** - Pull the oven rack straight forward until it reaches the stop position. Lift up front of oven rack slightly and slide out.

**To replace** - Place the oven rack on the rack guides on both sides of oven walls. Tilt the front of oven rack upward slightly and slide the oven rack back into place. Be sure oven racks are level before using.
Removing and Replacing the Glide Racks

The fully extendable Glide rack makes food preparation easier. This oven rack has glide tracks that allow the rack to be pulled away from the oven without rubbing the sides of the oven wall.

To remove - Using one hand, reach through handle opening and lift up on the release lever located across the lower front of the rack as shown in Figure 2.

While holding up the release lever, pull the glide rack out of the oven until the stop position is reached (Figure 3).

Using both hands, grasp the upper and lower portions of the glide rack. Lift up the front of the rack slightly and continue to pull the rack away from the oven (Figure 4). Be sure to grasp both upper and lower rack portions together when removing or handling the glide rack.

Figure 2: Grasp handle and lift up on bar

While holding up the release lever, pull the glide rack out of the oven until the stop position is reached (Figure 3).

Figure 3: Pull rack to stop position

The rack portions move independently and are difficult to handle unless held together.

To replace - Grasp both upper and lower portions of glide rack, lift and hold the rack level between the oven cavity walls. Tilt the front of the rack upward slightly and slide the rack completely into position.

Important: To prevent possible damage to the oven, do not attempt to close the oven door until all the oven racks are fully positioned back inside the oven cavity.

IMPORTANT

Do not line the oven walls, racks, bottom or any other parts of the oven with aluminum foil or with any other materials or oven liners. Doing so will alter heat distribution and may cause permanent damage to the oven interior. During clean the oven temperatures will be hot enough to melt foil.
OVEN MODE SETTINGS

NO PREHEAT - Use no preheat for single rack items only and place food in center of oven before setting temperature.

BAKE - Use to select bake function before setting temperature.

CLEAN - Use to select clean feature cycle before setting clean with oven temperature selector.

CONV BAKE - Use to select convection baking before setting oven temperature.

CONV ROAST - Use to select convection roast for beef, lamb, pork, and poultry before setting oven temperature.

BROIL - Use to set broil feature before setting broil with oven temperature selector.

KEEP WARM - Set BAKE, CONV BAKE, or CONV ROAST mode, then set KEEP WARM with oven temperature selector. Keep warm provides a low heat for keeping cooked foods at serving temperature.

OVEN DISPLAY FEATURES

User Preference Settings

The default (factory) settings for sounds, energy saving, temperature offset, and convection convert are pre-set in the oven control. These may be changed by accessing the user preference display while the oven is in the idle mode and no timers are active. Once the user preference menu is activated, the user can make changes and scroll through a menu of options, choosing from AUD (audible control setting), ES (energy saving), UPO (User Programmable Offset for changing the oven temperature), Aut (automatic convection convert), and DEF (default) setting with rSt reset choice (which will allow all preferences to reset to default settings).
**Setting the Clock**

The clock icon is used to access the time of day setting. When the oven is first plugged in or if there has been an interruption in power to the oven, **12:00** will flash in the display.

**To set the correct time of day:**
1. Press the clock icon.
2. The display will show a time along with a — and a + key in the display below.
3. Press either — or + key to scroll to the correct time of day and release the key.
4. The control will accept the new set time with a chime, and the control will show the time of day along with the two timers that are available.

**NOTE**

The clock cannot be changed when the oven is set for cooking or self clean is active. Only a 12 hour clock is available on the Frigidaire Professional model.

**Oven Light**

The oven lights will turn on automatically in both ovens when either oven door is opened. The oven lights may be turned on when the door is closed by using the oven light key located on the control panel. This will turn on both oven lights.

**Note:** Keep oven light off while baking. The oven light will turn off during a clean cycle and not operate.

**To toggle the oven lights on and off:**
1. Press oven light symbol ⬇️.

The interior oven light is covered with a glass shield. The glass shield must be in place whenever the oven is in use.

To change the interior oven lights, see “Replacing the Oven Light” in the Care & Cleaning section.

**Setting the Timer**

The minute timers in the oven display serve as extra timers to help keep track of cooking functions. The timer cannot be used during a self clean cycle or if the meat probe function associated with the timer display is in use. The minimum timer setting is 1 minute and the maximum setting is 11:59 (HR:MIN).

**To set the timer:**
1. Press either TIMER key.
2. The timer display will show **0:00** and the — and + keys on either side of the time display. NOTE: If the — key is pressed at this time an invalid key chime will sound.
3. Press the + key to begin to scroll to the desired setting. If the + key is held, the timer value will increase rapidly. Once the desired setting is reached, release the key and the timer will start counting down automatically after a short time-out.
4. The timer display will show the H:M icon if the timer is set for more than 1 minute. If the value is under 1 minute, the timer will display the time in seconds and the H:M icon will not appear.
5. When the timer ends, a reminder chime will sound and repeat once every 60 seconds for a period of five minutes. Before the user can program an expired timer again, the timer key must be pressed.
6. To cancel the timer before the set time expires, press the TIMER key.

**NOTE**

The minute timers will not start or stop the cooking process. The minute timers can be used alone or while using most of the other oven features.
SETTING OVEN CONTROLS

Setting Continuous Bake or 6 Hour Energy Saving

The oven is preset to cook up to 6 hours and to shut off automatically. For longer periods of cooking, this feature can be changed to continuous cooking by setting the user preference and turning the energy saving feature off.

To set the oven for continuous cooking:
1. Press and hold both the light icon and the clock icon at the same time for a few seconds until the display sounds an acceptance chime and the display will show one of the user preferences.
2. Press the $+$ key in the upper part of the display until ES appears and ON is showing.
3. To turn the energy saving feature off, press the $+$ or $-$ key in the lower part of the display and OFF will appear in the display.
4. The control will accept the change in a few seconds and sound the acceptance chime. The oven is now set for continuous cooking.
5. To return to the time of day display, press and hold the light and clock icons at the same time for a few seconds until the display chimes and fades back to showing the time of day in the display.

Setting Control for Silent Operation

The oven is set to operate with certain chimes and tones (default settings) that alert the user to certain oven functions. The silent operation feature allows the oven control to be operated without sounds when necessary. By accessing user preferences, this option can be later returned to operate with normal programming sounds.

To set the oven control for silent operation:
1. Press and hold both the light icon and the clock icon at the same time for a few seconds until the display sounds an acceptance chime. AUs should appear in the display.
2. If AUs is not showing, press the $+$ key in the upper part of the display until AUs appears and HI is showing in the lower part of the display. This is the normal (default) setting.
3. To turn the audible feature to a lower sound or completely OFF, press the $+$ or $-$ key in the lower part of the display until LO or OFF appears in the display.
4. When the desired setting appears in the display, release the key and wait for an acceptance chime.
5. To return to the time of day display, press and hold both the light and clock icons at the same time for a few seconds until the display chimes and fades back to showing the time of day.

Figure 1: Energy saving with ON and OFF options

Figure 2: Default setting for oven control sounds

Figure 3: Lowest audible setting (L) and OFF
Setting No Preheat

Use the No Preheat feature when you want to start baking immediately, without the need for preheating. No Preheat provides good results when preparing convenience foods such as cinnamon rolls, frozen pizza, bacon, french fries, and tater tots. Food will finish cooking in the time stated in the package directions without the extra time required for preheating.

During No Preheat the convection fan will pulse on and off, and the bake element will cycle on and off to maintain the set temperature for precise baking.

No Preheat is designed for baking on a single rack placed in the center of the oven and may be set for any temperature from 200°F to 550°F.

Important: For batter and dough-based baked goods such as cakes, pastries, and breads, use the convection function for best results.

No Preheat tips for best results:

- Always place the food in the center of the oven on rack position 3 (Figure 8). No Preheat is designed for baking on a single oven rack.
- When using No Preheat, use bakeware with low or no sides. This allows the air to circulate around the food evenly.
- Food that comes in strips, such as fish sticks and chicken tenders, should be placed on the pan with the ends pointing to the sides of the oven.
- Follow the package directions for food preparation time and temperature. No Preheat works best when cooking foods longer than 10 minutes. If directions call for a shorter cooking time, a few extra minutes may be required for optimal cooking results.
- Do not open the oven door often. Opening the door will reduce the temperature in the oven and may increase bake time.

To set No Preheat:

1. Remove food from packaging and arrange on baking pan.
2. Place pan in oven on rack position 3 and close oven door.
3. Turn the oven mode selector to No Preheat.
4. Turn the oven temperature selector to the desired temperature. Baking will begin immediately.
5. To stop baking turn the oven mode selector and oven temperature selector to the OFF positions.

CAUTION

Always use potholders or oven mitts when using the oven. When cooking, the oven interior will become hot and could cause burns.

Figure 4: Use rack position 3 for No Preheat baking
SETTING OVEN CONTROLS

Setting Bake

Use the Bake function whenever a recipe calls for baking using normal temperatures. Bake may be set for any temperature between 170°F and 550°F.

During Bake, convection fan will pulse on and off, and the bake element will cycle on and off to maintain the set temperature for precise baking.

Important: For batter and dough-based baked goods such as cakes, pastries, and breads, use the convection function for best results.

For best Bake results:

- Fully preheat the oven before baking items like cookies, cakes, biscuits, and breads.
- For single rack baking, position rack so food is in the center of the oven.
- Leave oven light off while baking.
- For best results when baking cookies using two oven racks, place the glide rack in position 5 and the flat rack in position 3.
- For best results when baking cakes using two oven racks, place Glide rack in position 4 with flat rack in position 1. (See Figure 9).
- Position cookware as shown in Figure 10. Allow at least 2-4 inches (5-10 cm) of space between cookware for proper air circulation when using multiple racks.
- Dark or dull bakeware absorbs more heat than shiny bakeware. It may be necessary to reduce oven temperature and cook time to prevent overbrowning.
- Dark bakeware is recommended for pies. Shiny bakeware is recommended for cakes, cookies, and muffins.
- Do not open oven door too often. Doing so reduces oven temperature and may extend cooking time.

To set a bake for 350°F:
1. Arrange oven racks.
2. Turn the oven mode selector to Bake.
3. Turn the oven temperature selector to 350°F.
4. When the oven reaches 350° the PREHEAT light will turn off and a reminder chime will alert you to place food in oven.
5. When finished baking, be sure to return both the temperature selector knob and the oven mode knob to the OFF positions.

Figure 5: Rack positions

Figure 6: Pan spacing for two rack baking
Convection Baking

Convection baking enables you to obtain the best results when baking with multiple pans and racks. The oven can be programmed for convection baking at any temperature between 170°F to 550°F. The convection function uses a fan to circulate the oven heat uniformly and continuously around the oven (Figure 11). This improved heat distribution allows for fast, even cooking and browning results. It also gives better baking results when using two oven racks at the same time. During convection baking, the convection fan may pulse on and off to maintain the set temperature for precise baking.

Benefits of convection cooking:

- Multiple rack baking.
- Some foods may cook faster, saving time and energy.

Convection baking tips:

- Because most food items will cook faster and more evenly with the convection feature, it is advisable to reduce recipe’s recommended temperature by 25° for best results. Follow the recipe’s instructions using the minimum recommended cook time.
- Fully preheat the oven before baking items like cookies, cakes, biscuits, and breads. Convection baking will produce the best results when baking these items.
- For single rack baking, position the rack so that food is in the center of the oven.
- If your recipe cooking temperature has already been converted for convection baking, there is no need to reduce your oven temperature. If not, see “Setting Convection Convert” on page 15 for further instructions on temperature conversion.
- For best results when baking cookies using two oven racks, place the glide rack in position 5 and the flat rack in position 3.
- For best results when baking cakes using two oven racks, place Glide rack in positions 5 with offset rack in position 1. (See Figure 11).
- When baking using two oven racks, position cookware as shown in Figure 12. Allow at least 2 inches (5 cm) of space between cookware for proper air circulation.
- Dark or dull bakeware absorbs more heat than shiny bakeware. It may be necessary to reduce oven temperature and cook time to prevent overbrowning of some foods. Dark bakeware is recommended for pies. Shiny bakeware is recommended for cakes, cookies, and muffins.

Setting Convection Bake

To set the oven for convection bake and temperature to 375°F:

1. Arrange interior oven racks.
2. Turn the oven mode selector to CONV BAKE.
3. Turn the oven temperature selector to 375°F.
4. Once the oven reaches the set temperature the oven will sound a chime indicating the food items can be placed in the oven.
5. When finished baking, be sure to return both the temperature selector knob and the oven mode knob to the OFF positions.

SETTING OVEN CONTROLS

Setting Convection Convert

Convection convert automatically converts a standard baking recipe for convection baking. Convection convert may only be used with convection bake.

Important: This feature must be set before selecting the oven mode and oven temperature by using the user preference setting in the oven display.

Because convection baking generally cooks food faster than normal baking, food items should be checked for doneness before the suggested normal recipe cook times.

To set convection convert:
1. The oven temperature selector must be in the OFF position.
2. Turn the oven mode selector to CONV BAKE.
3. Press and hold both the oven light key and the clock key for about 3 seconds until Aut° (automatic convection convert) appears in the display.
4. Press either the – or + key until On appears.
5. Turn the oven mode selector to the OFF position. The oven will accept the convection convert setting with an acceptance chime and the control will return to display the time of day. The convection bake function will now automatically convert normal baking temperatures for convection baking.

To change back to regular convection baking:
Repeat the same steps in this process and press the + or – key until OFF appears.

Once the control accepts the change with a chime, turn the oven mode selector to OFF.

Setting Convection Roast

Convection roast is best for cooking tender cuts of beef, lamb, pork, and poultry. Use this mode when cooking speed is desired. Convection roasting gently browns the exterior and seals in the juices. Convection roasting uses the bake element, convection element, broil element, and fan to circulate the heat evenly and continuously within the oven.

Convection roasting tips:
- Use a broiler pan and grid, as well as a roasting rack (available by mail order). The broiler pan will catch grease drippings, and the grid will help prevent spatters. The roasting rack will hold the meat. Make sure the roasting rack is securely seated on the grid in the broiler pan. Do not use the broiler pan without the grid or cover the grid with aluminum foil.
- Pull the rack out to the stop position before removing food. Position food (fat side up) on the roasting rack.
- Do not open the oven door often. Doing so will reduce the temperature in the oven and may increase the cooking time necessary for best results.
- It is not recommended to roast chicken on a roasting rack. Use a deep pan and place on rack position 1 (offset rack).
- Preheating the oven for convection roasting is not necessary.

To set oven for convection roasting:
1. Place meat on roasting rack and place in oven.
2. Turn oven mode selector to CONV ROAST.
3. Turn oven temperature selector to desired roasting temperature.
4. Once the control accepts the setting, the convection fan turns on and the oven will heat to the set temperature.
5. To cancel convection roast at any time, turn both the temperature control and the oven mode control to the OFF position.

* The U.S. Department of Agriculture states, “Rare fresh beef is popular, but you should know that cooking it to only 140°F (60°C) means some food poisoning organisms may survive.” (Source: Safe Food Book, Your Kitchen Guide, USDA Rev. June 1985.) The lowest temperature recommended by the USDA is 145°F (63°C) for medium rare fresh beef. For well done 170°F (77°C)

** Stuffed turkey requires additional roasting time. Shield legs and breast with foil to prevent over browning and drying of the skin.

---

**CAUTION**

Do not use the broiler pan without the insert. A roasting rack (some models) can be used when convection roasting. Do not cover the broil pan or insert with aluminum foil; the exposed grease could ignite.

---

**WARNING**

To prevent food from contacting the broil element and to prevent grease splattering, do not use the roasting rack when broiling.

Important: When roasting chicken use the offset rack in the lowest position for best results.

SETTING OVEN CONTROLS

Using the Broil Feature

Use the broil feature to cook meats requiring direct exposure to radiant heat for optimum browning results. Broiling will produce some smoke. If smoke is excessive, place the food further away from the broil element. Always watch food carefully to prevent burning. Always arrange oven racks when the oven is cool. The door must be closed for broil to operate. If the door is left open the display will show "d-O". Close the door for the function to resume. When broiling, always pull the oven rack out to the stop position before turning or removing food.

To set broil:
1. Arrange oven racks while oven is cool. Turn the mode selector knob to BROIL. The indicator light will flash.
2. Turn the temperature selector knob to BROIL. The indicator light will turn on and remain lit. For optimum browning results, preheat oven for 2 minutes before adding food.
3. Place the broiler pan on the rack. Be sure to center the broiler pan directly under the broiler element.
4. Broil with the oven door closed. Always pull the oven rack out to the stop position before turning or removing food.
5. Turn the temperature and the selector knobs to OFF when broiling is complete or to cancel broil.

Note: If a broiler pan and insert are not supplied with this appliance, they may be purchased from frigidaire.com.

Depending on the type, thickness, and the desired doneness of meat, it might be necessary to increase or decrease suggested broiling times or adjust the broiling pan to different rack positions. "Use offset rack in top position. The U.S. Department of Agriculture states, **Rare fresh beef is popular, but you should know that cooking it to only 140°F (60°C) means some food poisoning organisms may survive." (Source: Safe Food Book, Your Kitchen Guide, USDA Rev. June 1985.) The lowest temperature recommended by the USDA is 145°F (63°C) for medium rare fresh beef. For well done 170°F (77°C). All cook times shown are after 2 minutes of preheating.
Meat Probe

Use the probe feature for best results when cooking foods such as roasts, hams or poultry, using a probe to check internal temperature is the safest method to ensure properly cooked food. Before using the meat probe read the important information listed here:

**IMPORTANT**

- The probe feature must be set before setting the cooking mode and oven temperature.
- If no cooking mode is selected within 30 seconds of setting the target temperature, the oven mode indicator light will stop blinking. The display will continue to show the meat probe settings until an allowable cooking mode is selected.
- If a timer is running it must be canceled before the probe temperature can be set.
- If the meat probe is unplugged during a cooking function (or plugged in during BROIL) the oven will turn off.
- When the meat probe is set correctly, the control will signal an alert when the internal food temperature reaches the set temperature.
- When active, the internal food temperature is visible in the display during the cooking process. This eliminates any guesswork or the need to open the oven door to check the thermometer.

**Important:** If the meat probe is plugged in while the oven is in a function that allows for the meat probe, the control will sound an alert (triple beep) indicating that the meat probe cannot be set until the user does the following:

1. Cancel the active oven mode.
2. The display will show the meat probe icon and temperature 000°.
3. Set the desired meat probe temperature.
4. Set the desired oven mode.

Proper placement of probe in food.

- Insert the probe so that the probe tip rests inside the center of the thickest part of meat or food (Figure 17). For best results, do not allow the probe to contact bone, fat, gristle, or the cookware.
- For bone-in ham or lamb, insert the probe into the center of lowest large muscle or joint.
- For meatloaf or casseroles, insert the probe into center of food.
- When cooking fish, insert meat probe just above the gill.
- For whole poultry or turkey, fully insert the probe into the thickest part of the breast.

**Figure 13: Placing probe in poultry**

To set probe:

1. Insert the probe into the food. Place prepared food on the desired oven rack position and slide into the oven.
2. Plug the connector end of the probe into the probe receptacle while the oven is still cool. The receptacle is located on the upper left front oven cavity wall.
SETTING OVEN CONTROLS

Meat Probe (cont’d)

3. When the probe is inserted, an acceptance tone will sound, the probe icon appears in the display (See Figure 18). Close the oven door.

4. Press the + key to set the desired probe temperature between 140°F and 210°F. If no selection is made within 10 seconds, the control will automatically set the default temperature of 170°F and the display will sound an acceptance chime.

Note: The probe must be fully set before setting the oven mode and temperature mode.

5. Set the oven mode to NO PREHEAT, BAKE, CONV BAKE, or CONV ROAST.

6. Set the oven temp control to the desired cooking temperature. The oven will begin heating.

7. During the cooking process, an up arrow ↑ and the current meat probe temperature will appear in the display until the meat probe target temperature is reached.

8. When 75% of the target temperature is reached, the control will chime and a CHECK FOOD reminder will appear in the display. CHECK FOOD will remain in the display and continue to chime every 60 seconds for five minutes or until the oven door is open.

9. Once the target temperature of the food is reached, the control will chime to signal the end of cooking. At this time the ↑ will turn off and the display will show the FOOD READY and OVEN WARM messages.

Trailing Keep Warm with Meat Probe

When the meat probe reaches the target temperature, the oven will automatically switch to keep warm (170°F) and remain on for up to 3 hours before turning off automatically. The display will continue to show the meat probe temperature until either keep warm is canceled or by disconnecting the meat probe from the receptacle. Once turned off, the probe icon and temperature will fade from the display.

Important: If the meat probe temperature should exceed the maximum allowable temperature, the oven control will beep and HOT will appear in the display for 40 seconds to notify that the probe temperature is too high.

Setting Keep Warm

Keep Warm maintains a temperature of 170°F (77°C) for keeping oven baked foods at serving temperature until canceled. The feature may be used with BAKE, CONV BAKE, or CONV ROAST.

Keep warm tips:
- Always start with hot food. Do not use the keep warm feature to heat cold food.
- Food in heat-safe glass and glass ceramic containers may need higher temperature settings compared to food in regular containers. Avoid repeated openings of the oven, it will allow hot air to escape and the food to cool.
- Aluminum foil may be used to cover food to increase moisture content.

To set keep warm:

1. Arrange interior oven racks and place food in oven.
2. Turn the oven mode selector to BAKE, CONV BAKE, or CONV ROAST.
3. Set the oven temperature selector to KEEP WARM.
4. The indicator light will blink and then an acceptance chime will sound.
5. The preheat indicator light will turn on and stay on until the oven reaches the keep warm temperature of 170°F.
6. When finished using keep warm, be sure to turn both the oven mode selector and the oven temperature selector to OFF.

WARNING

Food Poisoning Hazard. Do not let food sit for more than one hour before or after cooking. Doing so can result in food poisoning or sickness.

Setting the Sabbath Feature

This appliance provides special settings for use when observing the Jewish Sabbath/Holidays. For further assistance, guidelines for proper usage, and a complete list of models with the Sabbath feature, please visit the web at www.star-k.org.

Sabbath mode disables all audible tones or visual display changes on the oven control. The oven light will turn off and remain off until the Sabbath mode is canceled. The Sabbath feature may only be used with the bake function and can be set for both ovens if desired. Once the oven is set using bake with the Sabbath feature active, the oven will remain on until canceled.

Figure 15: Oven display showing Sabbath mode

Note: The control will allow any sounds associated with alarms. The oven temperature may be changed by adjusting the oven temperature selector. The active oven will remain in Sabbath until canceled by the user. The Sabbath feature overrides the factory preset 6 hour energy saving feature. The meat probe feature is not available in Sabbath mode.

To turn off the Sabbath feature:

1. Turning the oven mode selector and the oven temperature selector to the OFF position will cancel BAKE only in the active oven.
2. To turn off the Sabbath feature press and hold both the oven light key and the clock key for about 3 seconds.
3. SAB will disappear from the display. Be sure both oven selectors are returned to the OFF positions.

Power failure while using Sabbath feature:

Should you experience a power failure or interruption, the oven will shut off. When power is returned, SF (Sabbath Failure) will be displayed, and the oven will not turn back on automatically. If your food was nearly fully cooked, you may allow the trapped heat in the oven to finish the cooking process. Otherwise, you should remove the food when the power failure occurs because you may only start the oven once during the Sabbath/Jewish holidays.

To turn off the Sabbath Failure (SF) message:

1. Turn the oven mode selector and the oven temperature selector to the OFF position.
2. Press and hold both the oven light and clock key for at least 3 seconds.
3. SF will disappear from the display, and the oven may be used with all normal functions.

WARNING

Food Poisoning Hazard. Do not let food sit for more than one hour before or after cooking. Doing so can result in food poisoning or sickness.

To set the oven for baking and activate the Sabbath feature:

1. Be sure the clock is set to the correct time of day. Place food in the oven.
2. Turn the oven mode selector to BAKE.
3. Turn the oven temperature selector to the desired bake temperature.
4. An acceptance chime will sound, the oven will start heating and the LED lights will stop blinking and remain on.
5. To enter Sabbath mode, press and hold the oven light key and the clock key at the same time for about 3 seconds. The control will sound an acceptance chime and SAB will appear in the display below the time of day.

IMPORTANT

- If both ovens are set for Sabbath mode, canceling one oven will not stop the bake function in the other oven.
- If Sabbath mode is activated while one oven is in Bake and other is off, the idle oven will remain inactive. Both ovens must be set to Bake before activating the Sabbath mode if desired.
- Only the Bake function is allowed in an oven. If a non-Bake function is active in one oven and Sabbath is requested, the control will generate the Invalid Key Tone (triple beep) and ignore the request.

Food Poisoning Hazard. Do not let food sit for more than one hour before or after cooking. Doing so can result in food poisoning or sickness.
SETTING OVEN CONTROLS

Adjusting the Oven Temperature

The temperature in the oven is pre-set at the factory. When first using the oven, be sure to follow recipe times and temperatures.

Do not use oven thermometers such as those found in grocery stores to check the temperature settings inside your oven. These oven thermometers may vary as much as 20 to 40 degrees from actual temperatures.

If you think the oven is cooking too hot or too cool for the temperature you select, you can adjust the actual oven temperature to be more or less than what is displayed by accessing the UPO (User Programmable Offset).

Before adjusting, test a recipe by using a temperature setting higher or lower than the recommended temperature. The baking results should help you to decide how much of an adjustment is needed.

Important: Before making a temperature adjustment, make sure both the oven mode and oven temperature control knobs are in the OFF position.

To adjust the oven temperature:

1. When the oven is idle, press and hold both the light icon and the clock icon at the same time for a few seconds until the display sounds an acceptance chime. AUD should appear in the display.
2. Press the + key in the upper part of the display until UPO appears and the default setting of 0° (or the last offset temperature) is showing.
3. Using the + or - key in the bottom of the display, press until the desired temperature change (offset) is reached. The display will change ± 5° with each key press to a maximum of +35° or a minimum of –35°F.
4. Release the key and the control will accept the change.
5. To return the display to normal, press and hold both the oven light icon and the clock icon at the same time until an acceptance chime sounds. The display will return to show the time of day.

Figure 16: UPO shown at default setting

Figure 17: UPO shown 10° higher than default

If a lower temperature offset is desired, press the – key in the bottom of the display until the desired lower temperature appears.

Figure 18: UPO shown 10° lower than default

Restoring Factory Control Settings

Your appliance was set with standard oven control settings. Over time these may have been changed. Restoring the control to factory (default) settings will affect the following:

- Continuous bake or 6 hour energy saving
- Silent or audible control
- Oven temperature adjustments

To restore oven control to default settings:

1. When the oven is idle, press and hold both the light icon and the clock icon at the same time for a few seconds until the display sounds an acceptance chime.
2. Press the + key in the upper part of the display until rSt appears and yes or no appear in the lower part of the display.
3. Press the + or - key to toggle between yes (to reset to default) or no (to leave current settings as they are).
4. When the desired setting appears, the control will accept the change after a few seconds with a beep and return to the clock mode.

NOTE

Changing the UPO will not affect the broil or self clean temperatures.
Self Cleaning

A self cleaning oven cleans itself with temperatures well above normal cooking temperatures which eliminate soils completely or reduces them to a fine powdered ash you can wipe away with a damp cloth.

While the oven is in operation, the oven heats to temperature much higher than those used in normal cooking. Sounds of metal expansion and contraction are normal. Odor is also normal because the food soil is being removed. Smoke may appear through the oven vent.

**IMPORTANT**

**Adhere to the following self clean precautions:**
- Do not use oven cleaners or oven protective coatings in or around any part of the oven interior.
- Do not clean the oven door gasket (Figure 23). The woven material of the oven door gasket is essential for a good seal. Care should be taken not to rub, damage, or remove the gasket.
- Do not use any cleaning materials on the oven door gasket. Doing so could cause damage.
- Remove the broiler pan and insert, all utensils, and any aluminum foil. These items cannot withstand high cleaning temperatures and will melt.
- Completely remove all oven racks and any accessories. If the oven racks are not removed, they will lose their special coating properties and no longer slide in and out of the oven cavity easily.
- Remove any excessive spills. Any spills on the oven bottom should be wiped up and removed before starting the self cleaning cycle. To clean, use hot, soapy water and a cloth. Large spills can cause heavy smoke or fire when subjected to high temperatures.
- Do not allow food spills with a high sugar or acid content (such as milk, tomatoes, sauerkraut, fruit juices, or pie filling) to remain on the surface as they may leave a dull spot even after cleaning.
- Clean any soil from the oven frame, the door liner outside the oven door gasket, and the small area at the front center of the oven bottom. These areas heat sufficiently to burn soil on. Clean with soap and water. These areas are shown in white (Figure 23).

**CAUTION**

During the self cleaning cycle, the outside of the oven can become very hot to the touch.

Do not leave small children unattended near the appliance.

The health of some birds is extremely sensitive to the fumes given off during the self cleaning cycle of any oven. Move birds to another well ventilated room.

Do not force the oven door open. This can damage the automatic door locking system. Use caution when opening the door after the self cleaning cycle is complete. The oven may still be very hot.

**Figure 19: Clean around the oven door gasket**
SETTING OVEN CONTROLS

Setting Self Clean

If you are planning to use the oven directly after a self clean cycle, remember to allow time for the oven to cool down and the oven door to unlock. This normally takes about one hour. A 3 hour self clean cycle will actually take about 4 hours to complete.

It is recommended to use a 2 hour self clean cycle for light soils, a 3 hour cycle for average soils, and a 4 hour cycle for heavy soils.

To set the controls for a 3 hour self clean cycle and shut off automatically:

1. Turn both the oven mode and oven temperature selectors to CLEAN. The display will show a 3 hour time (normal clean) and the – and + keys.

   Figure 20: Oven set for 3 hour clean

2. If a 3 hour clean is desired, the control will accept the time within 3 seconds. However, the user may select a 2 or 4 hour clean by using the – or + keys to change to the desired clean time and then allow the control to accept the change.

   Figure 21: Setting 2 hour clean

   Figure 22: Setting 4 hour clean

Once the control accepts the clean time the display will flash a reminder for the user to REMOVE RACKS. The REMOVE RACKS notification will flash for a few seconds prompting the user to remove all oven racks. If the oven door is opened as this time the display will show CLO to indicate that the door must be closed before the clean cycle can begin. If the door remains open for more than 3 minutes, the clean function will be canceled.

When the oven is set to run the clean cycle, the motor door lock will begin locking the oven door. Do not attempt to open the oven door while the lock motor is running or when any locking indicators or displays are showing; this can damage the door locking system. The oven door is completely locked in about 15 seconds.
3. Once the door is closed the time of day will be visible along with the selected clean time and the door lock icon will be blinking in the display. Do not force the oven door open when the self clean is active. This can damage the automatic door locking system.

4. During the clean cycle the time of day remains in the display and the time remaining in the clean cycle will also be active. (Figure 29)

5. When the clean cycle ends the oven will be too hot for the door to unlock until the oven cools to a safe temperature. This may take up to an hour. During this time the display will show Hot along with the door lock icon.

6. Once the oven temperature reaches a safe level, CLn will appear in the display and the lock icon will blink to signal the end of the clean cycle with a chime. Do not force the oven door open when the lock icon is showing in the display; this can damage the automatic door locking system.

7. Move both the oven mode and temperature mode knob to the OFF position to clear the display.

Caution: To avoid possible burns, use care when opening the oven door after a self clean cycle. Stand to the side to allow any steam and heat to escape. The internal oven temperature will still be hot enough to cause burns even though the bake and broil elements appear to have cooled.

Note: Once the clean cycle ends the oven will not be available for another clean for 4 hours.

To cancel a self clean before it ends:
Turn both the oven selector knob and the oven temperature knob to the OFF position.

CARE AND CLEANING

General Cleaning

Refer to the table at the beginning of this chapter for more information about cleaning specific parts of the oven.

**CAUTION**

Before manually cleaning any part of the oven, be sure all controls are turned off and the oven is cool. The oven may be hot and can cause burns.

Remove all racks and accessories from the oven before cleaning.

Ammonia must be rinsed before operating the oven. Provide adequate ventilation.

Follow these cleaning precautions:

- Allow the oven to cool before cleaning.
- Wear rubber gloves when cleaning the appliance manually.

Remove soils using hot, soapy water. Do not allow food spills with a high sugar or acid content (such as milk, tomatoes, sauerkraut, fruit juices or pie filling) to remain on the surface as they may cause a dull spot even after cleaning. Remove spillovers and heavy soiling as soon as possible. Regular cleaning will reduce the effort required for major cleaning later.

Cleaning Porcelain Enamel Oven

The oven interior is porcelain on steel, it is safe to clean using oven cleaners.

To remove heavy soil:

1. Allow a dish of ammonia to sit in the oven overnight or for several hours with the oven door closed. Clean softened dirt spots using hot, soapy water. Rinse well with water and a clean cloth.

2. If soil remains, use a nonabrasive scouring pad or a nonabrasive cleaner. If necessary, use an oven cleaner following manufacturer's instructions. Do not mix ammonia with other cleaners.

3. Clean any soil from the oven frame, the door liner outside the oven door gasket and the small area at the front center of the oven bottom. Clean with hot, soapy water. Rinse well using clean water and a cloth.

Boiler Pan Cleaning Tips

To prevent grease from baking on, remove the broiler pan from the oven as soon as cooking is completed. Use oven mitts because the broiler pan is extremely hot. Pour off grease. Soak the pan in hot, soapy water.

Clean the broiler pan as soon as possible after each use. If necessary, use soap-filled steel wool pads. Heavy scouring may scratch the grid.

CARE AND CLEANING

Aluminum Foil, Aluminum Utensils, and Oven Liners

**WARNING**

Never cover any slots, holes, or passages in the oven bottom or cover an entire oven rack with materials such as aluminum foil. Doing so blocks air flow through the oven and may cause carbon monoxide poisoning. Aluminum foil linings may trap heat, causing a fire hazard.

- **Protective liners**—Do not use aluminum foil to line the oven bottom. The high heat of the oven can melt these materials to the oven cavity and ruin the oven. These types of materials can also reduce the effectiveness of the air circulation in the oven and produce poor baking results. Only use aluminum foil as recommended in this manual. Improper installation of these liners may result in risk of electric shock or fire.

- **Aluminum utensils** - The melting point of aluminum is much lower than that of other metals. Care must be taken when aluminum pots or pans are used.

- **Oven racks** - Do not use aluminum foil to cover the oven racks. Using a liner in the oven restricts the heat and air flow needed to obtain the best possible cooking results for any oven.

**Adhere to the following precautions when using spray oven cleaners:**

- Do not spray cleaner on the electrical controls or switches because it could cause a short circuit and result in sparking or fire.

- Do not spray any cleaner on the oven door trim or gasket, broiler drawer glides, handles or any exterior surfaces of the oven, plastic or painted surfaces. The cleaner can damage these surfaces.

- Do not allow a film from the cleaner to build up on the temperature sensing bulb; it could cause the oven to heat improperly. The bulb is located in the rear of the oven. Carefully wipe the bulb clean after each oven cleaning, being careful not to move the bulb. A change in its position could affect how the oven bakes. Avoid bending the bulb and capillary tube.

Replacing the Oven Light

**CAUTION**

Be sure the oven is unplugged and all parts are cool before replacing the oven light.

The interior oven light is located at the rear of the oven cavity and is covered by a glass shield. The glass shield must be in place whenever the oven is in use (Figure 33).

To replace the oven interior light bulb:

1. Turn electrical power off at the main source or unplug the appliance.
2. Remove interior oven light shield by turning a quarter turn counter-clockwise.
3. Replace bulb with a new T-4 type Halogen 25 watt appliance bulb.
4. Replace glass oven light shield by rotating clockwise.
5. Turn power back on again at the main source (or plug the appliance back in).
6. Be sure to reset the time of day on the clock.

**NOTE**

Wear a cotton glove or use a paper towel when installing a new bulb. Do not touch the new bulb with your fingers when replacing. This will shorten the life of the bulb.

Removing and Replacing the Oven Door

**IMPORTANT**

Special door care instructions - The door is heavy. For safe, temporary storage, lay the door flat with the inside of the door facing down.

Most oven doors contain glass that can break. Do not close the oven door until all the oven racks are positioned correctly in the cavity. Do not hit the glass with bakeware or any other objects. Scratching, hitting, jarring, or stressing the glass may weaken its structure, causing an increased risk of breakage at a later time.

To remove the oven door:
1. Open oven door completely, horizontal with floor.
2. Pull up the lock located on each hinge support toward front of the oven until the lock stops. You may have to apply a little upward pressure on the lock to pull it up (Figure 35 and Figure 36).
3. Grasp the door by the sides, and close the door until the door frame makes contact with the unlocked hinges.
4. Pull the bottom of the door toward you while rotating the top of the door toward the appliance to completely disengage the hinge levers (Figure 37).

To Replace Oven Door:
1. Firmly grasp both sides of oven door along the door sides. Do not use the oven door handle (Figure 37).
2. Hold the oven door at the same angle as the removal position. Carefully insert the hinge levers into the oven frame until you feel the hinge levers are seated into the hinge notches. The hinge arms must be fully seated into the hinge notches before the oven door can be fully opened. (Figure 37).
3. Fully open the oven door, horizontal with floor (Figure 34).
4. Push the door hinge locks up toward and into the oven frame on both left and right oven door hinges to the locked position (Figure 35).
5. Close the oven door.
CARE AND CLEANING

Caring for your glide racks

**CAUTION**

Handle oven racks only when they are cool. After cooking racks will be very hot and can cause burns.

**Important:** Remove all oven racks before starting a self clean cycle. If oven racks are left inside the oven during a cleaning cycle, the slide ability of the glide rack may be damaged and the racks will lose their finish.

- Anytime the gliding is rough, the glide rack tracks should be treated with graphite lubrication.
- Do not use cooking oil, cooking spray, or other oil-based lubrication products on the glide rack extension tracks. Use only the graphite lubrication in this area. To order graphite lubrication, contact your installer, servicer or dealer.

**To lubricate the glide rack:**

1. Remove the rack from the oven and place the rack on a large flat surface covered with newspaper or scrap cloth. Fully extend the rack.
2. Wipe away debris and crumbs from the glide track using a cloth or sponge.
3. Shake graphite lubrication very well before applying. Place four drops of graphite lubrication along the tracks (see area circled on figure below). Repeat on both sides of the glide rack.
4. Extend and return the glide rack several times along the tracks to distribute the lubrication.
5. Turn glide rack over. Shake graphite lubrication very well before applying. Place four drops of graphite lubrication along the tracks. Repeat on both sides of the glide rack.
6. Extend and return the glide rack several times along the tracks to distribute the lubrication.
7. Apply a thin layer of cooking oil to the outer frame of the glide rack as shown below. Keeping the frame sides lightly lubricated allows the entire rack to slide easily when changing rack positions.
8. Replace rack in oven right side up.
## Solutions to Common Baking Problems

For best cooking results, fully preheat the oven before baking cookies, breads, cakes, pies or pastries, etc.
There is no need to preheat the oven for roasting meat or baking casseroles.
The cooking times and temperatures needed to bake a product may vary slightly from your previously owned appliance.

Before you call

Oven does not operate.

• The time of day is not set. The oven clock must first be set in order to operate the oven. See “Setting the Clock” on page 10.

• Be sure oven controls are set properly. See “OVEN DISPLAY FEATURES” beginning on page 9 and review instructions for the desired cooking function in this manual.

• Before setting the oven, both mode and temperature knobs should be set to OFF.

• If the indicator lights above oven mode or oven temp selection knobs remain flashing, the oven will not heat. Turn both knobs to OFF, wait 5-10 seconds, then set the oven mode and oven temp again.

• If the oven mode and oven temp combination is mismatched, the oven will not heat. For example: bake mode with broil temperature, or clean mode with a cooking temperature. These combinations will cause an error. Turn both knobs to OFF, wait 5-10 seconds, then set the oven mode and oven temp again, with a correct mode and temperature. For example: broil mode should have broil temperature selected; clean mode should have clean temperature selected. Review the section of this manual for the cooking mode you wish to use.

• Set both mode and temperature selection knobs to OFF when finished cooking.

Oven smokes excessively when broiling.

• Incorrect setting. See “Using the Broil Feature” on page 17.

• Meat too close to the broil element. Reposition rack to provide proper clearance between the meat and broil element. Remove excess fat from meat. Cut remaining fatty edges to prevent curling, but do not cut into lean.

• Grease build up on oven surfaces. Regular cleaning is necessary when broiling frequently. Grease or food splatters will cause excessive smoking.

Oven racks discolored or do not slide easily.

• Clean by using a mild abrasive cleaner following manufacturer’s instructions. Rinse with clean water, dry, and replace in oven.

• To maintain glide rack see “Caring for your glide racks” on page 29.

Oven light does not work.

• Be sure the oven light is secure in the socket. See “Replacing the Oven Light” on page 27.

Fan noise occurring after the oven is turned off

• Some models are equipped with a cooling fan that runs during the cooking process to cool internal electronic components. It is normal for this fan to continue to run for an extended period of time, even when the oven has been turned off.
